

Hi -

I am a resident of 734 Rock Creek Church Road NW, Washington DC 20010. I am concerned with the construction of this new condo building without dedicated parking and using street parking in our neighborhood. The additional parking spaces required for this condo building will constrain parking in the neighborhood and add additional noise / traffic. The demand for street parking is already high in the neighborhood. I ask that you kindly re-evaluate the builder's request to use street parking. If the builder is looking to move into this area, it should be their responsibility to operate professionally in an established neighborhood. This means providing off-street parking for their tenants to minimize the disruption and impact to the existing community.

Thanks,

Chris Hang
