2/23/2007

Dear Ms. Mitten :

Progressive Radiology practices in the Foxhall Square building of Northwest D.C., where we provide MRI services. We work closely with many physicians in the area, to help provide high-quality medical care to the patients we serve.

As you know, Sibley Hospital is planning to build a medical office building in the Palisades section of Northwest D.C. Granting approval to this project would adversely affect the medical practices that are established in this area, as well as the citizens that live here.

There is enough commercial real estate in this area, with several business either attached to, or next to the Foxhall Square Mall building. The Foxhall Square Mall building contains 40 medical suites, and over 70 physicians and their staff practice here. The building has operated since the early 1970s, with a long record of superb integration with the local community.

The Foxhall building is less than five minutes away from the proposed Sibley building. Thus, the proposed Sibley building would add no new services to this area, and would only detract from the pleasing residential character of the neighborhood. There is much local opposition to this structure.

The proposed Sibley building has an excellent chance of being a mostly vacant structure. Our practice will not be moving from our present location. I have spoken with many of my physician colleagues in Foxhall, and they also have no intention of leaving their current practice location. In addition, there are very few physicians seeking to establish practices in District of Columbia, due to the adverse medical malpractice environment here. In fact, many physicians are either moving their practice out of the District of Columbia, or are trying to establish practices in Maryland or Virginia, so they can obtain a "blended" medical malpractice rate.

All of these factors will combine to create a mostly vacant commercial building, with no added services to the community. I urge you to deny approval for the proposed building, which is unnecessary, and will harm the existing residential, medical, and business community in the region.

Sincerely,

M. Loren Perlmutter, M.D.
