

Today's
School Without Walls

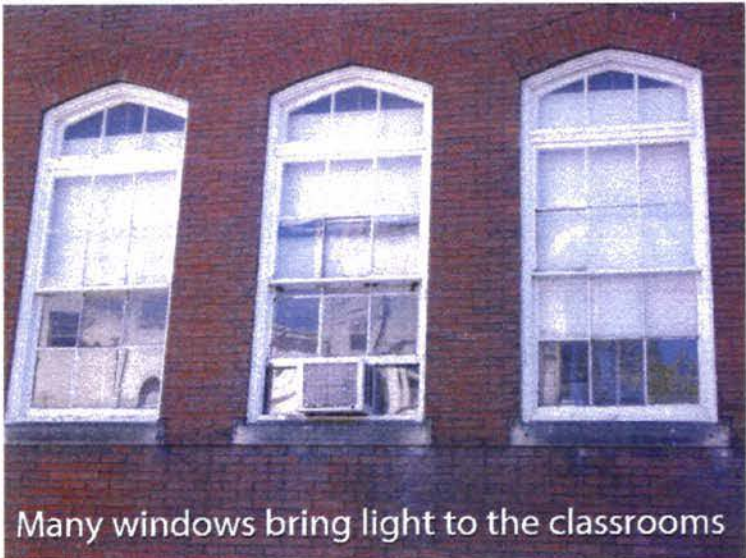

A place for
students...

and "visitors"

And the mess they leave behind

Many windows bring light to the classrooms

Well, some light

ZONING COMMISSION
District of Columbia
CASE NO. 06-17
EXHIBIT NO. 46

And some air, even when closed

No, that's not a map of Asia

And that's not Indiana

There's running water...

in the walls

And in the ceiling

Many places in the ceiling

In some ways it truly is
a school without walls

On ceilings

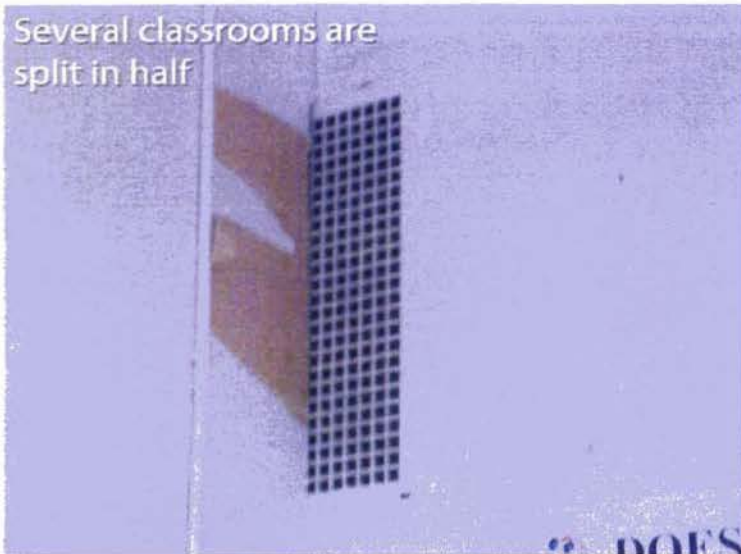

But it does have mold

And other hazardous materials

Several classrooms are split in half

But the construction is less than first rate

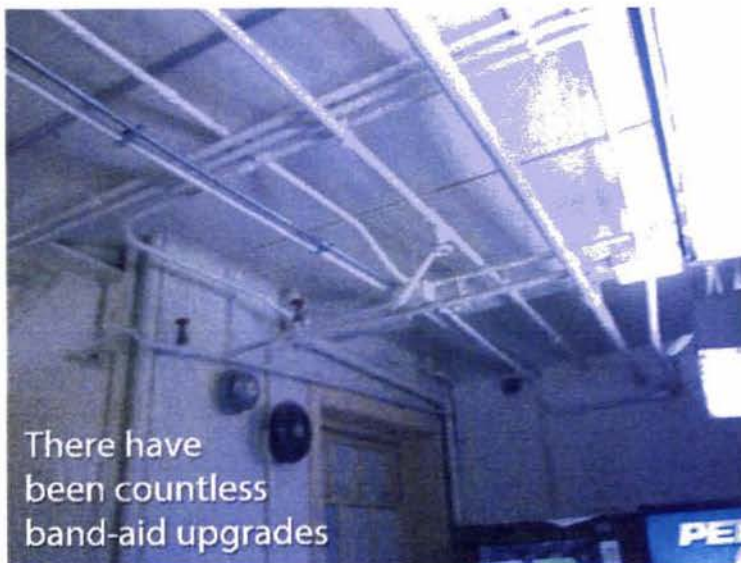

The only student restrooms are in the basement...

and they are in miserable condition

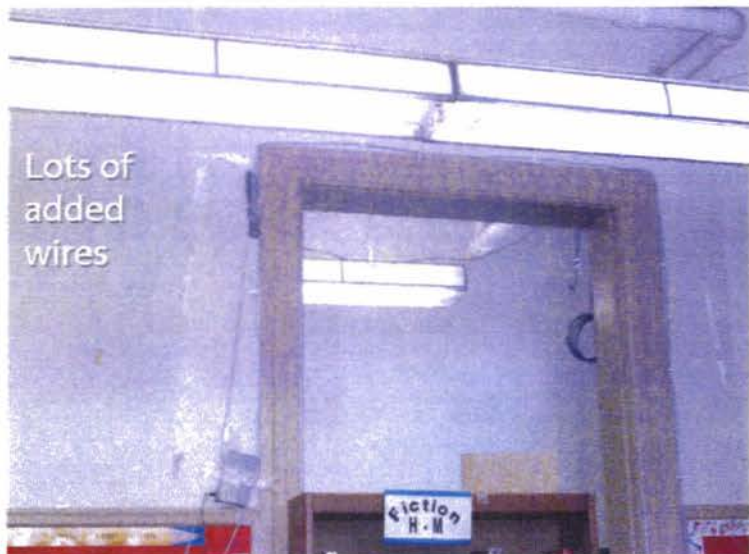

There have been countless band-aid upgrades

Like the added sprinkler pipes

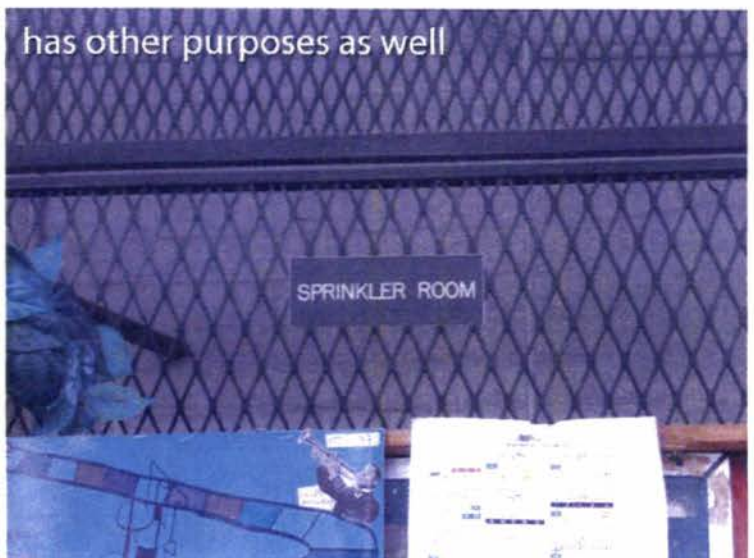

Lots of added wires

And the inevitable extension cords

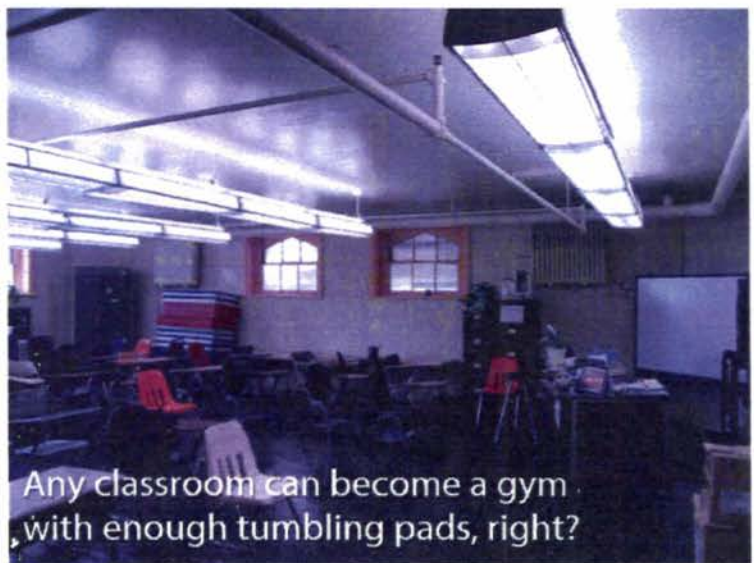

The music classroom...

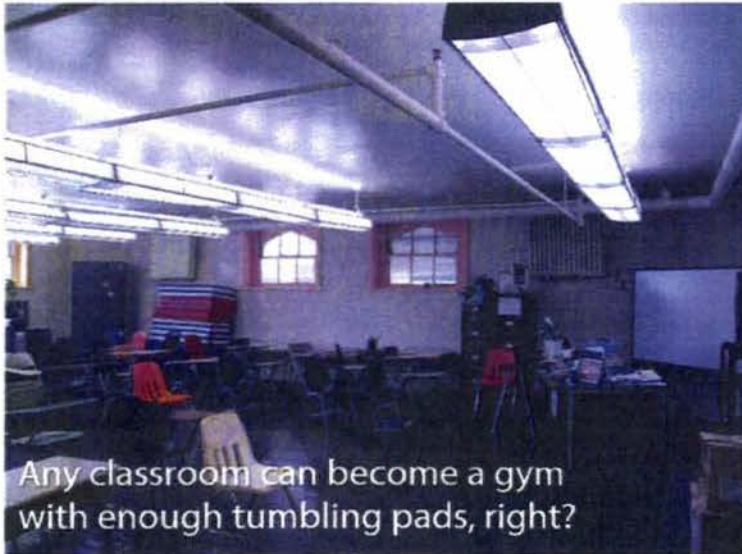

has other purposes as well

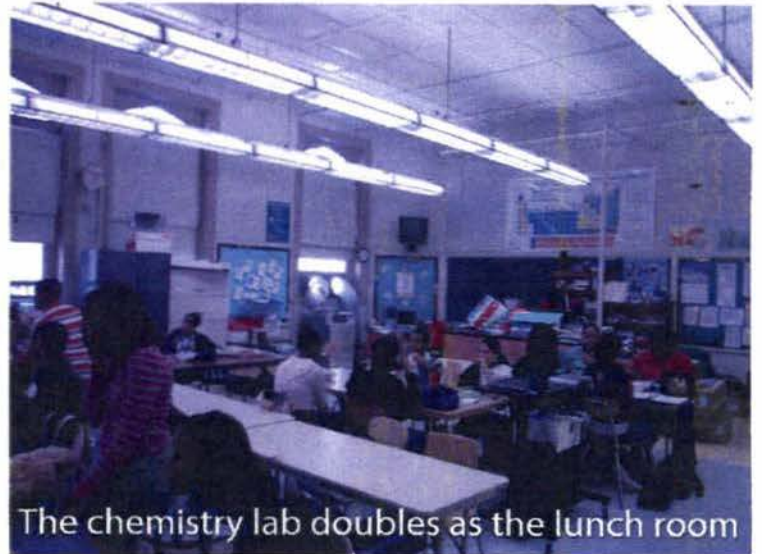

In fact almost every space is "multipurpose"

Any classroom can become a gym with enough tumbling pads, right?

Any classroom can become a gym with enough tumbling pads, right?

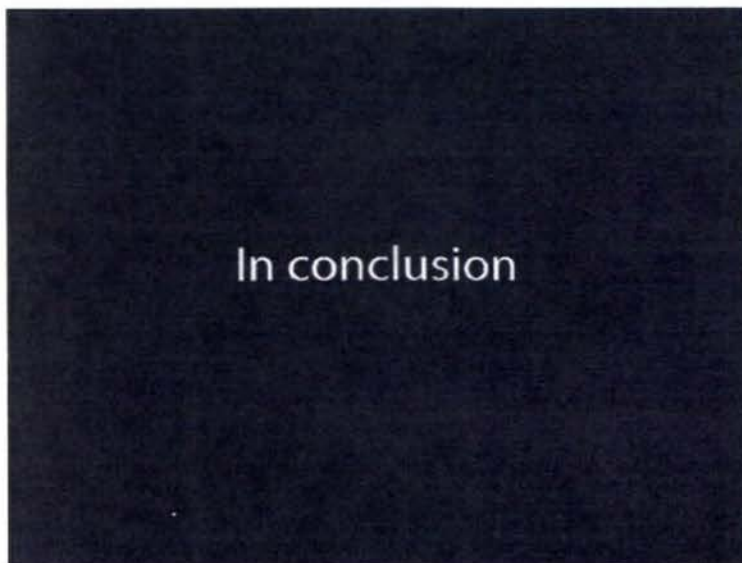

The chemistry lab doubles as the lunch room

"Food service" is in the basement

And without ADA access, parent-teacher conferences are held in the parking lot.

In conclusion

It's a good deal to trade this parking lot...

For the new School Without Walls
