

EXHIBIT F

ENVIRONMENTAL ANALYSIS

1. Water Demand

The average daily water demand for this project can be met by the existing District water system. The connection for the fire and office water supply will remain the same.

2. Sanitary Sewer Demand

The connection for the sanitary sewer line will remain the same. Any changes to the existing distribution system and will be coordinated with the D.C. Department of Public Works.

3. Stormwater Management

The requisite system will be designed and constructed in compliance with the standards set by the D.C. Department of Public Works, the Department of Health, and the D.C. Water and Sewer Authority. The inclusion of the green roof and other design measures will allow the project to exceed these standards.

4. Solid Waste Services

Solid waste and recycling materials generated by the project will be collected by a private trash collection contractor.

5. Electrical Services

Electricity will be provided by the Potomac Electric Power Company (PEPCO) in accordance with its usual terms and conditions of service. All electrical systems will be designed

to comply with the D.C. Energy Code. Any new transformers will be installed on the Subject Property in accordance with PEPCO's design guidelines.

6. Energy Conservation

The project will be constructed in full compliance with Article 24 (Energy Conservation) of the District of Columbia Building Code. The project will exceed code standards and will minimize the amounts of energy needed for the heat, ventilation, hot water, electrical distribution, and lighting systems contained in the building.

7. Erosion Control

During excavation and construction, erosion on the Subject Property will be controlled in accordance with District of Columbia law.
