Gregory A. Kearley, AIA, Principal

Gregory A. Kearley began his career in Washington, DC at Ellerbe Becket. While there, he worked on a number of commercial and institutional projects, including as a designer of a research center for the United States Department of Agriculture, in Beltsville, MD. After leaving Ellerbe Beckett, Greg joined Travis Price Architects. While there he worked on various residential and commercial projects for this award winning firm. In 1998 Greg started Inscape Architects, which has since merged with istudio to form Inscape Studio.

In helping shape Inscape Studio it was not Greg's intention to create a singular stylistic approach to architecture, but to put into place a framework for a collective design process. It is acknowledged that in describing the work of Inscape Studio Greg speaks with a collective "I".

Community and Institutional Architecture

Greg has been involved in many projects and consultations with non-profit organizations, including the Patricia Sitar Center for the Arts and Action to Rehabilitate Community Housing, both located in Washington, DC. Greg recently led a team that designed a series of women's centers in Afghanistan. The centers provide basic medical and educational services for women, enabling them to improve their health and economic welfare.

Multi-Family and Single Family Residential Architecture

Greg has been the catalyst for various multi-family and single-family dwellings. The King's Creek condominiums in Washington, DC provide a mixed-use facility that brings natural light and outdoor living areas to the 13 residential units. Greg led the team that used concrete block, corrugated metal, stucco and glass to create an industrial language for the building and reinforce the structure's variety of forms.

Through the efforts of the entire Inscape team, Greg has designed and managed a number of innovative and recognized single-family homes. The Holzarth residence was a modern interpretation of regional seaside architecture. Located in the Northern Neck of Virginia, this 2,500sf residence is a series of continuous open spaces with views through to the water. The Washington, VA residence was an exploration of the juxtaposition between a simple geometric form set within a natural landscape.

Commercial and Retail Architecture

Greg has worked with a number of retail establishments to provide professional services from initial site evaluations through post construction consultation. Through Greg's leadership the approach to commercial and retail design has been to listen to our client's needs and have these needs realized through an innovative and contemporary design.

1. Firm Approach: Improving the Places We Inhabit

Inscape Studio is a collaboration of architects, designers and planners, dedicated to the design of livable, sustainable communities. We provide professional design services to individual clients for residential, commercial and institutional projects. We also provide consulting services to aid organizations and communities in urban planning, development and urban renewal.

Our goal at **Inscape Studio** is to improve the quality of life for people by improving the places we inhabit. We incorporate the practice of environmentally responsible or "green" architecture to provide healthy places to live and work. Professional services for residential, commercial and institutional projects include:

- architecture
- interior design
- urban design
- landscape architecture
- "green" design consulting
- community design process

We consider clear communication with our clients and project team our most important tool. This dialogue allows us to find the aesthetic image most appropriate to a client's particular project. Finding this image, together with designing projects of lasting value, on time and within budget, is paramount to our work. Our projects range is size and type, from new home design and office interiors to community centers and urban renewal projects.

Formed from the joining of two local architecture firms - istudio design and Inscape Architects - **Inscape Studio** offers expertise in planning and design to communities of all sizes. We bring years of experience in facilitation, coalition-building and design education to aid the process of developing projects from the "ideas" stage to construction and habitation.
