

We are very concerned about the effects that the new building will have on parking. I access my garage through the alley and there is already several issues with the volume of cars that park on the alley. Adding new parking spots will put extra pressure on an already overcrowded space. It would be very important to have a very strict control of the parking situation, not allowing more than the allotted number of cars and especially zero tolerance for parking outside designated areas.

Additionally, a childcare facility is being planned for the house right behind this building (816 6th st NE), we have serious concerns in how they are going to share the alley space and the risk they they will block the exit from my house.
