Recommended Map Amendment

Proposed map amendment recommended for adoption by the Office of Planning. Recommended amendments may be modified from the original proposal in extent or classification.

Residential Land Use Categories

- Low Density Residential**
Defines the District's single family neighborhoods. Single family detached and semi-detached housing units with front, back, and side yards are the predominant uses.
- Moderate Density Residential**
Defines the District's row house neighborhoods as well as its low-rise garden apartment complexes. Also applies to areas characterized by a mix of single family homes, 2-4 unit buildings, row houses, and low-rise apartment buildings. In some older inner city neighborhoods with this designation there may also be existing multi-story apartments.
- Medium Density Residential**
Defines neighborhoods or areas where mid-rise (4-7 stories) apartment buildings are the predominant use. Pockets of low and moderate density housing may exist within these areas. This designation also may apply to taller residential buildings surrounded by large areas of permanent open space.
- High Density Residential**
Defines neighborhoods and corridors where high-rise (8 stories or more) apartment buildings are the predominant use. Pockets of less dense housing may exist within these areas.

Commercial Land Use Categories

- Low Density Commercial**
Defines shopping and service areas that are generally low in scale and character. Retail, office, and service businesses are the predominant uses. Areas range from small business districts that draw primarily from the surrounding neighborhoods to larger business district uses that draw from a broader market area. Their common feature is that they are comprised primarily of one- to three-story commercial buildings.
- Moderate Density Commercial**
Defines shopping and service areas that are somewhat more intense in scale and character than the low-density commercial areas. Retail, office, and service businesses are the predominant uses. Areas range from small business districts that draw primarily from the surrounding neighborhoods to larger business district uses that draw from a broader market area. Buildings are larger and/or taller than those in low density commercial areas but generally do not exceed five stories in height.
- Medium Density Commercial**
Defines shopping and service areas that are somewhat more intense in scale and character than the moderate-density commercial areas. Retail, office, and service businesses are the predominant uses. Areas generally draw from a citywide market area. Buildings are generally larger and/or taller than those in moderate density commercial areas but generally do not exceed eight stories in height.
- High Density Commercial**
Defines the central employment district of the city and other major office employment centers on the downtown perimeter. Characterized by office and mixed office/retail buildings greater than eight stories in height, although many lower scale buildings (including historic buildings) are interspersed.
- Production, Distribution, and Repair**
This category defines areas characterized by manufacturing, warehousing, wholesale and distribution centers, transportation services, food services, printers and publishers, tourism support services, and commercial, municipal, and utility activities which may require substantial buffering from noise-, air pollution- and light-sensitive uses such as housing. This category is also used to denote railroad rights-of-way, switching and maintenance yards, bus garages, and similar uses related to the movement of freight, such as truck terminals.

APARTMENT BUILDING PARKING EXPLORATION:

- Cannot build below grade parking due to lack of width of site & excavation requirement
- Investigated solution provides ramp from public alley to North, connecting to 2nd floor level of Apartment Building.
 - Above grade parking - not desired
 - Maneuvering is difficult due to tight layout
 - One full floor of units (9 units) removed from project
 - Must relocate stair/elevators to accommodate parking, creates very inefficient unit layouts above.

***Therefore, parking within Apartment Building is infeasible.

APARTMENT 2ND LEVEL PLAN W/ PARKING LEVEL

APARTMENT BUILDING SECTION W/ PARKING LEVEL

TOWNHOME BUILDING PARKING EXPLORATION:

Only possible solution is to provide parking below grade, below retail level of the Townhome Building

- Required ramp not long enough
- Curb cut required from Connecticut Avenue - not allowed
- Would effectively eliminate public plaza, a public amenity for the neighborhood
- Undesired excavation near Metro tunnel

***Therefore, parking below Townhome Building is infeasible.

TOWNHOME BUILDING BELOW-GRADE PARKING PLAN
