**ST ELIZABETH HOSIPTAL
VERIZON WIRELESS “CELL ON WHEELS” TEMPORARY ANTENNA INSTALLATION**

Overview: The Verizon Wireless temporary “cell on wheels” antenna installation on the St Elizabeth Hospital Campus is designed to require nominal maintenance and service. The facility is unmanned and hard wired directly to municipal electric and telephone service. All equipment will be enclosed by fencing to mitigate easy access to the facility and limit exposure to the drip line (or ice) from the antennas/tower.

1. A Verizon Wireless representative will access the facility every 10-14 days to assess the proper functioning of the facility.
2. The emergency generator will be exercised, no more than once a week and for not more than 1 hr. at a time to confirm operability.
3. Verizon Wireless will post an appropriate notice on the exterior of the site with identification information and a toll free 800 number for the public to report any issues or concerns regarding the site. The number (866-862-4404) is manned 24/7 and will dispatch Verizon Wireless representative to the site.
4. If equipment is necessary to address the landscape/hardscape immediately abutting the installation, scheduling will be coordinated with the District of Columbia in order to eliminate any interference to the ongoing operation of the neighboring facilities.
5. Service and maintenance inside the equipment trailer will be performed on an “as-needed” basis and will not affect to overall visual attributes of the installation.
6. Upon completion of the term of the installation, all equipment brought onsite will be removed and any impacted areas will be addressed.
7. Depending on the underlying conditions, the area would be graded, seeded and/or sodded to reclaim the area to its original condition as reasonably possible.
