Summary and Recommendations

This section summarizes the transportation strategies of the Campus Plan, reviews the transportation impacts of the Campus Plan by mode, and presents recommendations for implementing the transportation strategies of the Campus Plan.

Summary

The Campus Plan's transportation strategy is guided by its Planning Principles of improving quality of life, improving the public realm, and enhancing physical access and connectivity. The transportation strategy is comprised of five (5) elements, including:

- 1. Ensuring there is no net increase in parking supply;
- 2. Improving pedestrian conditions and connectivity;
- 3. Increasing multimodal access;
- 4. Providing safe, efficient access to the new Howard University Hospital; and
- 5. Being a good transportation neighbor.

As stated at the end of the Parking, Pedestrian, Bicycle, Transit, Transportation Demand Management (TDM), and Roadway chapters, there are ways which each of the major transportation proposals presented in this CTR supports at least some of these strategies. These are presented together in Table 27.

Recommendations

The following are recommendations for implementing the transportation strategies of the Campus Plan.

Campus-wide Recommendations

No net increase in parking supply

This CTR recommends ensuring there is no net increase in parking supply on campus throughout the duration of the Campus Plan.

Transportation Demand Management (TDM)

This CTR also recommends implementing each of the proposed TDM plan's Committed Actions and as many of the Discretionary Actions as possible.

The following Committed Actions are included in the proposed TDM Plan:

- The University has already increased staff and student parking permit rates substantially since the 2011 Campus Plan.
 The University will continue to increase permit rates to help deter single-occupant driver parking and raise revenue for TDM programs.
- The University will unbundle tenant parking by raising the monthly visitor parking permit rate to \$180. The University already charges non-University tenants for access to University parking facilities. However, to qualify as "unbundled" according to DDOT's CTR guidelines, tenant parking rates need to increase until they at least equal the lowest monthly rate offered by a commercial parking facility within one quarter-mile of the campus. Based on a recent survey of nearby parking rates, the lowest monthly rate is \$180, compared to HU's current monthly rate of \$160 for a visitor permit.
- The University will continue to invest in improving its shuttle services based on staff and student feedback, as well as in anticipation of new development projects that may alter traffic patterns and sources of demand for shuttle service. Further Processing for each building proposed in the Campus Plan will include a review of existing shuttle ridership patterns, whether the proposed building is expected to alter ridership patterns, and recommendations for improving shuttle service if applicable.

- The University will maintain existing bus routes and stops during any and all University construction events in order to
 avoid transit service disruptions for the University and surrounding communities. Further Processing for parcels abutting
 WMATA bus routes or stops (Parcels A, E, F, and J as shown on Figure 5) will include plans for maintaining bus service.
- The University will continue promoting transit commuting benefits for faculty and staff via WMATA's SmartBenefits program. Currently the maximum pre-tax allowed amount is \$270/month for transit only, \$104/month for parking only, and \$374/month for transit and parking.
- The University will provide space for and fund an additional Capital Bikeshare station on the central campus. Based on the location of existing and planned stations, this CTR recommends somewhere on the southern part of campus near the new Howard University Hospital as a potential location. If this location is chosen, the University will fund the station as part of Further Processing for whichever of the hospital-related parcels (Parcels D, E, G, or H as shown on Figure 5) is developed first. If another location is chosen, the station will be funded as part of Further Processing for whichever of the Campus Plan proposed buildings (shown on Figure 5) is closest to the proposed station.
- The University will post a downloadable copy of the final TDM Plan on its website and in other University media.
- The University will continue designating a TDM Coordinator, who will implement, monitor, and market the TDM programs, provide personalized commuter counseling to help members of the HU population understand their options, and act as a point of contact with DDOT, goDCgo, and Zoning Enforcement.
- The University's Transportation Coordinator will develop, distribute, and market various transportation alternatives and options to employees and students, including promoting transportation events (i.e., Bike to Work Day, National Walking Day, Car Free Day) on relevant websites and in any relevant internal newsletters, communications, or displays. These materials will contain sections oriented to different users, including faculty/staff, students, and visitors. Any students living on-campus will be provided with a packet of information upon or prior to moving-in. New faculty/staff hires will be provided with a similar packet of information. Further Processing for each building proposed in the Campus Plan will include a discussion of building-specific TDM marketing materials, if applicable.
- The University will prominently display links to commuter support websites on appropriate University webpages, including links to CommuterConnections.com, DDOT's Washington, DC Bicycle Map, Washington Walks, nearby bicycle vendors and service providers, goDCgo.com, and WMATA.
- The University will perform annual monitoring to understand student, faculty and staff mode choice in relation to TDM practices, parking pricing, and University transportation policies, and release annual monitoring reports containing this information. The purpose of this monitoring is to make data-driven decisions about which TDM measures, if any, need to be adjusted to meet the primary TDM goal of ensuring that academic parking demand per student does not rise above its current level. The monitoring reports will include the recommended survey question modifications outlined in the above TDM Assessments section of this report. The monitoring will be used to inform future TDM- and parking-related decisions to further incentivize non-auto modes and minimize impacts by the University on the surrounding community. The monitoring reports will include the following:
 - Mode split surveys of the campus population, broken down by students and employees;
 - Current parking inventory and occupancy on a typical weekday;
 - Number of permits sold per year;
 - o Parking availability on surrounding neighborhood streets;
 - Number of registered carpools;

- Number of people enrolled in WMATA SmartBenefits; and
- Inventory and occupancy of bicycle racks.
- The University will prepare an annual TDM and Parking report to be submitted to DDOT. These reports will focus first and foremost on documenting progress toward the TDM Plan performance targets that the University has agreed to. Further Processing for each building proposed in the Campus Plan will reference these reports, identifying trends and progress towards TDM goals and allowing these to inform parking and other transportation-related elements of the proposed buildings. The performance targets that the University has agreed to are as follows:
 - o By the end of the 2020 Campus Plan (2030), the University sets a goal of ensuring that academic parking demand per student does not rise above its current level of 0.126 peak hour-occupied parking spaces per student. This will be the primary measure of success for the Campus Plan's five (5) transportation strategies, as this metric is the result of a direct measurement, not of surveys which may be susceptible to error. Achieving this goal will also help the University implement the Campus Plan, as reduced demand can lead to less parking supply being added to proposed buildings, reducing costs to the University. If parking demand per student increases, it will be seen as an indicator that more discretionary TDM measures are needed. A decrease in parking demand per student is an aspirational goal of the Campus Plan.
 - The University sets the following mode split goals for trips to campus by the end of the 2020 Campus Plan (2030), which are informed by A) *MoveDC*'s non-auto mode share goal for commute trips of 75%, B) the latest mode splits for both residents and employees in the campus's census Transportation Analysis Zone (TAZ), and C) the 2019 cumulative student/faculty/staff mode splits of 53% auto, 30% transit, 1% bike, and 16% walk for trips to campus. While the mode splits below are identified as aspirational goals, the primary measure of success for the TDM Plan is peak parking demand per student, as noted above. The mode split goals are as follows:
 - For students:

Drive alone: ≤ 40%

Carpool: ≥ 2%

• Transit: ≥ 50%

Bike: ≥ 15%

Walk: ≥ 30%

For faculty/staff:

Drive alone: ≤ 20%

Carpool: ≥ 2%

• Transit: ≥ 40%

Bike: ≥ 5%

Walk: ≥ 20%

• The University will develop formal "Alternative Work Schedule" guidelines, which will define opportunities for telecommuting as well as maintaining non-traditional weekly work schedules. The University's Transportation Coordinator will ensure that the TDM benefits of various policy options – reducing peak-hour travel and parking demand – are considered when developing and implementing these guidelines.

- The University will significantly expand the quantity and quality of bicycle parking facilities on campus, both at existing building sites and at the new University development sites identified in the Campus Plan. A more detailed discussion of proposed bicycle parking quantities and locations will be included in Further Processing for proposed buildings.
- The University will install an additional 20 bicycle parking spaces every year over the course of the Campus Plan and
 include a bicycle parking inventory with every annual TDM report. These spaces are intended to serve existing buildings
 that do not have sufficient bicycle parking and does not include parking spaces added as part of new buildings.
- As part of Further Processing for Parcel B or C (shown on Figure 5), whichever enters Further Processing first, the
 University will coordinate with DDOT to explore removing on-street parking spaces along 6th Street between Fairmont
 Street and Bryant Street to make room for multimodal improvements such as bike lanes, curb extensions, or
 bike/scooter parking corrals.

TDM Performance Monitoring

This CTR recommends conducting annual TDM surveys which will inform annual TDM monitoring. These surveys and assessments should follow the recommended survey question modifications outlined earlier in the TDM chapter of this report. The purpose of this monitoring is to make data-driven decisions about which TDM measures, if any, need to be adjusted to meet the primary TDM goal of ensuring that academic parking demand per student does not rise above its current level.

Recommendations for Further Processing

This CTR recommends the following actions be taken during Further Processing for each of the proposed buildings in the Campus Plan.

Parcel A: Burr Intercollegiate Athletic Center

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- A detailed review of pedestrian, bicycle, and transit facilities along Georgia Avenue adjacent to the parcel;
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM commitments.

Have the project explore upgrading the sidewalks adjoining the site along Georgia Avenue and Girard Street, which currently do not meet DDOT width requirements. The project should also explore improving the existing WMATA bus stop at Georgia Avenue and Gresham Place, just north of the parcel, which currently does not have all recommended bus stop amenities.

Parcel B: Center for Arts & Communications

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;
- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- An examination of potential mitigations at the following intersections with movements or approaches that operate at unacceptable conditions, which are partially attributable to the addition of parking facilities at this parcel:
 - Georgia Avenue and Harvard Street NW (minor signal timing adjustments)
 - Harvard Street and 5th Street NW (minor signal timing adjustments)
- Details on the building's proposed loading operations; and

Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM commitments.

Parcel C: Howard Student Union

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;
- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- An examination of potential mitigations at the following intersections with movements or approaches that operate at unacceptable conditions, which are partially attributable to the addition of parking facilities at this parcel:
 - o Georgia Avenue and Harvard Street NW (minor signal timing adjustments)
 - Harvard Street and 5th Street NW (minor signal timing adjustments)
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM commitments.

Parcel D: Health Sciences Complex

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- A detailed review of pedestrian, bicycle, and transit facilities along 6th Street adjacent to the parcel;
- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;
- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- An examination of potential mitigations at the following intersections with movements or approaches that operate at
 unacceptable conditions, which are partially attributable to the addition of parking facilities at this parcel:
 - o 4th Street and College Street NW (minor signal timing adjustments)
 - 4th Street and Bryant Street NW (converting Bryant Street from one-way to two-way, converting on-street parking into a 75-foot eastbound right-turn lane, minor signal adjustments)
 - Georgia Avenue and W Street NW (converting W Street from one-way to two-way, minor signal timing adjustments)
 - o 4th Street and W Street NW (converting W Street from one-way to two-way)
 - Georgia Avenue and V Street/HU Hospital NW (minor signal timing adjustments)
 - Georgia Avenue/7th Street and Florida Avenue NW (minor signal timing adjustments)
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM commitments.

Have the project explore upgrading the sidewalks adjoining the site along 6th Street and College Street, which currently do not meet DDOT width requirements. The project should also explore upgrading the curb ramps adjoining the parcel at 6th Street and College Street, and 6th Street and Bryant Street, which do not comply with ADA standards.

Parcel E: STEM Facility

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;
- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- An examination of potential mitigations at the following intersections with movements or approaches that operate at
 unacceptable conditions, which are partially attributable to the addition of parking facilities at this parcel:
 - 4th Street and College Street NW (minor signal timing adjustments)
 - 4th Street and Bryant Street NW (converting Bryant Street from one-way to two-way, converting on-street parking into a 75-foot eastbound right-turn lane, minor signal adjustments)
 - Georgia Avenue and W Street NW (converting W Street from one-way to two-way, minor signal timing adjustments)
 - 4th Street and W Street NW (converting W Street from one-way to two-way)
 - Georgia Avenue and V Street/HU Hospital NW (minor signal timing adjustments)
 - o Georgia Avenue/7th Street and Florida Avenue NW (minor signal timing adjustments)
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM commitments.

Have the project explore upgrading the sidewalks adjoining the site along 4th Street and College Street, which currently do not meet DDOT width requirements.

Parcel F: Apartment-style Residences

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;
- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM
 commitments, which for this facility may include TDM strategies specifically targeted for students living on campus.

Have the project explore upgrading the sidewalks adjoining the site along 9th Street, which currently do not meet DDOT width requirements. The project should also consider installing a pedestrian path between the buildings that connects Sherman Avenue and 9th Street.

Parcel G: Medical Office

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- A detailed review of pedestrian, bicycle, and transit facilities along 6th Street adjacent to the parcel;
- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;

- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- An examination of potential mitigations at the following intersections with movements or approaches that operate at unacceptable conditions, which are partially attributable to the addition of parking facilities at this parcel:
 - o 4th Street and College Street NW (minor signal timing adjustments)
 - 4th Street and Bryant Street NW (converting Bryant Street from one-way to two-way, converting on-street parking into a 75-foot eastbound right-turn lane, minor signal adjustments)
 - Georgia Avenue and W Street NW (converting W Street from one-way to two-way, minor signal timing adjustments)
 - o 4th Street and W Street NW (converting W Street from one-way to two-way)
 - o Georgia Avenue and V Street/HU Hospital NW (minor signal timing adjustments)
 - Georgia Avenue/7th Street and Florida Avenue NW (minor signal timing adjustments)
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM
 commitments, which for this facility may include TDM strategies specifically targeted for medical staff.

Have the project explore upgrading the sidewalks adjoining the site along 6th Street and Bryant Street, which currently do not meet DDOT width requirements.

Parcel H: Howard University Hospital

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- A detailed review of pedestrian, bicycle, and transit facilities along 6th Street adjacent to the parcel;
- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;
- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- An examination of potential mitigations at the following intersections with movements or approaches that operate at
 unacceptable conditions, which are partially attributable to the addition of parking facilities at this parcel:
 - 4th Street and College Street NW (minor signal timing adjustments)
 - 4th Street and Bryant Street NW (converting Bryant Street from one-way to two-way, converting on-street parking into a 75-foot eastbound right-turn lane, minor signal adjustments)
 - Georgia Avenue and W Street NW (converting W Street from one-way to two-way, minor signal timing adjustments)
 - o 4th Street and W Street NW (converting W Street from one-way to two-way)
 - Georgia Avenue and V Street/HU Hospital NW (minor signal timing adjustments)
 - o Georgia Avenue/7th Street and Florida Avenue NW (minor signal timing adjustments)
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM
 commitments, which for this facility may include TDM strategies specifically targeted for medical staff and hospital
 patients and visitors.

Have the project explore upgrading the sidewalks adjoining the site along 6th Street, Bryant Street, and W Street, which currently do not meet DDOT width requirements. The site plan should also explore upgrading the curb ramp adjoining the parcel at 6th Street and College Street, which does not comply with ADA standards.

Parcel J: Wonder Plaza Mixed-Use

Prepare a Comprehensive Transportation Review or Transportation Statement as required by DDOT, including:

- A detailed review of pedestrian, bicycle, and transit facilities along Georgia Avenue adjacent to the parcel;
- An updated inventory of existing campus-wide parking supply and proposed parking facilities for the building, including bicycle parking;
- A potential analysis of parking access to ensure safe and efficient operations on HU and public streets, to be scoped with DDOT at the time of Further Processing;
- An examination of potential mitigations at the following intersections with movements or approaches that operate at unacceptable conditions, which are partially attributable to the addition of parking facilities at this parcel:
 - Georgia Avenue and Barry Place NW (converting on-street parking into a 100-foot eastbound right-turn lane, minor signal timing adjustments)
 - Georgia Avenue and Bryant Street NW (converting Bryant Street from one-way to two-way, minor signal adjustments)
 - Georgia Avenue/7th Street and Florida Avenue NW (minor signal timing adjustments)
- Details on the building's proposed loading operations; and
- Any building-specific TDM measures that may be applicable or advisable in meeting the University's overall TDM
 commitments, which for this facility may include TDM strategies specifically targeted for students living on campus and
 retail patrons.

Have the project explore upgrading the sidewalks adjoining the site along Georgia Avenue and Bryant Street, which currently do not meet DDOT width requirements. The project should also explore improving the existing WMATA bus stop at Georgia Avenue and Barry Place adjoining the parcel, which currently does not have all recommended bus stop amenities.

Table 27: How Proposals Support Campus Plan Transportation Strategies

Campus Plan Transportation Strategy	How Parking Proposals Support the Strategy	How Pedestrian Proposals Support the Strategy	How Bicycle Proposals Support the Strategy	How Transit Proposals Support the Strategy	How TDM Proposals Support the Strategy	How Roadway Proposals Support the Strategy
Ensure these is no net increase in parking supply.	Remove parking from the campus core; Ensure each proposed building's Further Processing notes the number and existing parking spaces on campus and demonstrates the project will not lead to an increased parking supply.	Improved pedestrian facilities will enhance multimodal access, encouraging more people to walk, which will reduce pressure on parking supply.	N/A	N/A	The proposed TDM plan will reduce demand of single-occupant vehicles to and from campus, which will reduce pressure on parking supply.	N/A
2. Improve pedestrian conditions and connectivity.	Removing parking from the campus core will reduce the amount of vehicular activity in the core, which will result in a more pedestrian-friendly environment and allow new pedestrian connections where parking lots currently exist.	Removing parking from the campus core will reduce the amount of vehicular activity in the core, which will allow a more pedestrian-friendly environment as well as room for physical improvements such as curb extensions and green spaces.	N/A	Reevaluating HU shuttle routes as new activity centers emerge on campus will help the shuttles better function as "pedestrian accelerators" for short trips around campus.	The proposed TDM plan includes a discretionary action to implement physical improvements to the campus's pedestrian network.	The recommended roadway modifications around the new hospital will include safe, generous pedestrian facilities.
3. Increase multimodal access and facilities in the campus core.	Removing vehicular activity from the campus core will allow for multimodal improvements like bike/scooter parking corrals, bike lanes, or curb extensions.	Improved pedestrian facilities will foster better pedestrian access to shuttles, transit, and other multimodal facilities.	Reducing the amount of vehicles accessing parking from campus core roadways will result in an improved bicycling experience in this area, with fewer vehicles overall and more road space that can be dedicated to bike lanes and bike/scooter parking.	Reevaluating HU shuttle routes as new activity centers emerge on campus will help the shuttles better function as "pedestrian accelerators" for short trips around campus, contributing to a more multimodal profile in the campus core. Considering upgrades to existing shuttle or WMATA bus stops during Further Processing for applicable buildings will improve multimodal facilities.	The proposed TDM plan includes committed actions to A) fund and provide space for a new Capital Bikeshare station on campus, and B) expand bicycle parking, as well as discretionary actions to A) develop a bike parking map, B) add changing and showering facilities for bicycle commuters, and C) explore ways to improve multimodal services on campus, including on-street bike/scooter parking corrals.	N/A
4. Provide safe, efficient access to the new Howard University Hospital.	N/A	The new hospital's forthcoming transportation and access scheme will include pedestrian-friendly streets and facilities.	The new hospital's forthcoming transportation and access scheme will include bicycle-friendly streets and facilities.	The new hospital's forthcoming transportation and access scheme will include considerations of how best to serve the facility with existing public transit and a possible reconfiguration of HU shuttles.	N/A	The recommended roadway modifications around the new hospital will include safe, efficient facilities for all modes of travel.
5. Be a good transportation neighbor.	Reduce vehicle trips to and from the campus, creating a more pedestrian-friendly environmnet for students, faculty, and nearby residents and allow a less auto-centric frontage along Georgia Avenue.	Removing parking from the campus core will allow a more pedestrian-friendly environment at the public-facing areas of the campus, particularly along Georgia Avenue and at the eventual development of the old hospital site.	Reducing the amount of vehicles accessing parking from campus core roadways will result in an improved bicycling experience in this area, which can be enjoyed by students, faculty, and nearby residents alike.	Reevaluating HU shuttle routes as new activity centers emerge on campus will allow the campus to maintain a multimodal transportation profile, reducing vehicular trips to and from the campus. Considering upgrades to existing shuttle or WMATA bus stops during Further Processing for applicable buildings will improve transit facilities for students, faculty, and nearby residents alike.	The proposed TDM plan will reduce demand of single-occupant vehicles to and from campus, which will reduce the traffic and parking impacts of the campus.	The recommended roadway modifications around the new hospital will ensure a safe and orderly transportation scheme that allows the hospital to be a good neighbor.

Proposed Trip Generation Methodology for Campus Trips (2 of 5)

1. Estimate future employee and student peak parking demand by extrapolating existing demand per individual to projected populations.

- 2. Distribute existing and added employee and student parking demand into individual parking locations based on proposed lot removals and additions.
 - Existing parking demand to remain in place
 - Existing parking demand to be redistributed
 - Added parking demand

Proposed Trip Generation Methodology for Campus Trips (3 of 5)

3. Convert redistributed and added parking demand into peak hour trips for each parking location using the following rates of trips generated per occupied parking space:

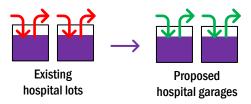

AM peak hour: 0.35 (0.30 inbound and 0.05 outbound) PM peak hour: 0.40 (0.05 inbound and 0.35 outbound) Existing parking demand to remain in place Existing parking demand to be redistributed Accounted for in trip generation Added parking demand Removed trips Added trips Remove existing demand from lots to be removed. **Existing lots Existing lots Proposed** to remain to be removed garages Redistribute that demand to remaining lots and proposed **Existing lots** garages. **Existing lots Proposed** to remain to be removed garages Add new demand to proposed garages. **Existing lots Proposed** to remain garages

Proposed Trip Generation Methodology for Campus Trips (4 of 5)

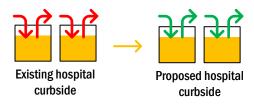

4. For hospital* trip generation, use the same parking space-based trip generation rates to relocate all parking demand at the existing hospital to the new hospital site. The relocated trips are a straight swap (no increase or decrease in demand from the old to the new site).

AM peak hour: 0.35 (0.30 inbound and 0.05 outbound) PM peak hour: 0.40 (0.05 inbound and 0.35 outbound)

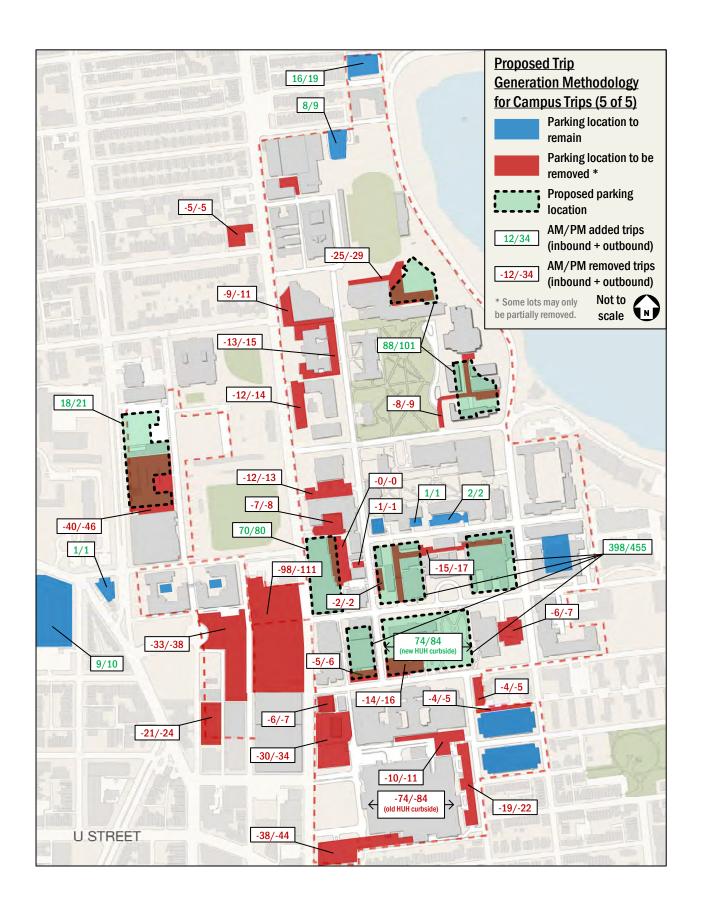

- Existing parking demand to be relocated
- Removed trips
- Added trips

- 5. Relocate all hospital* trips generated by non-parking curbside vehicles (TNC, ambulance, delivery, etc.) from the existing hospital to the new hospital site. These trip quantities are based on video data collected at the existing hospital and are a straight swap (no increase or decrease in demand from the old to the new site).
 - Existing curbside activity to be relocated
 - -> Removed trips
 - → Added trips

* For both the existing and new sites, "hospital" includes the hospital itself and all associated medical office and educational buildings.

Retail	1.82 ppl/veh	12 veh/hr	8 veh/hr	20 veh/hr	38 veh/hr	42 veh/hr	80 veh/hr

Trip Gen Summary for Proposed Land Uses

Mode		AM Peak Hour		PM Peak Hour				
Wiode	In	Out	Total	In	Out	Total		
Auto	12 veh/hr	8 veh/hr	20 veh/hr	38 veh/hr	42 veh/hr	80 veh/hr		
Transit	10 ppl/hr	5 ppl/hr	15 ppl/hr	30 ppl/hr	33 ppl/hr	63 ppl/hr		
Bike	3 ppl/hr	2 ppl/hr	5 ppl/hr	10 ppl/hr	11 ppl/hr	21 ppl/hr		
Walk	29 ppl/hr	17 ppl/hr	46 ppl/hr	90 ppl/hr	97 ppl/hr	187 ppl/hr		

Trip Generation

Removed Wonder Plaza retail

Step 1: Base trip generation using ITEs' Trip Generation 10th Edition

Land Use	Land Use Code	Quantity (x)		AM Peak Hour			PM Peak Hour	
Laria O3C	Lana OSC Code	Qualitity (x)	In	In Out Total		In Out		Total
Retail	820	-50,000 sf	-29 veh/hr	-18 veh/hr	-47 veh/hr	-92 veh/hr	-99 veh/hr	-191 veh/hr
Calculation Details:			62%	38%	=0.94(X/1000)	48%	52%	=3.81(X/1000)

Note: Setting used for trip generation above is General Urban/Suburban

Step 2: Convert to people per hour, before applying mode splits

Land Use	People/Car		AM Peak Hour		PM Peak Hour					
Land OSE	(from 2017 NHTS, Table 16)	In	Out	Total	In	Out	Total			
Retail	1.82 ppl/veh	-53 ppl/hr	-33 ppl/hr	-86 ppl/hr	-167 ppl/hr	-181 ppl/hr	-348 ppl/hr			

Step 3: Split between modes, per assumed Mode Splits

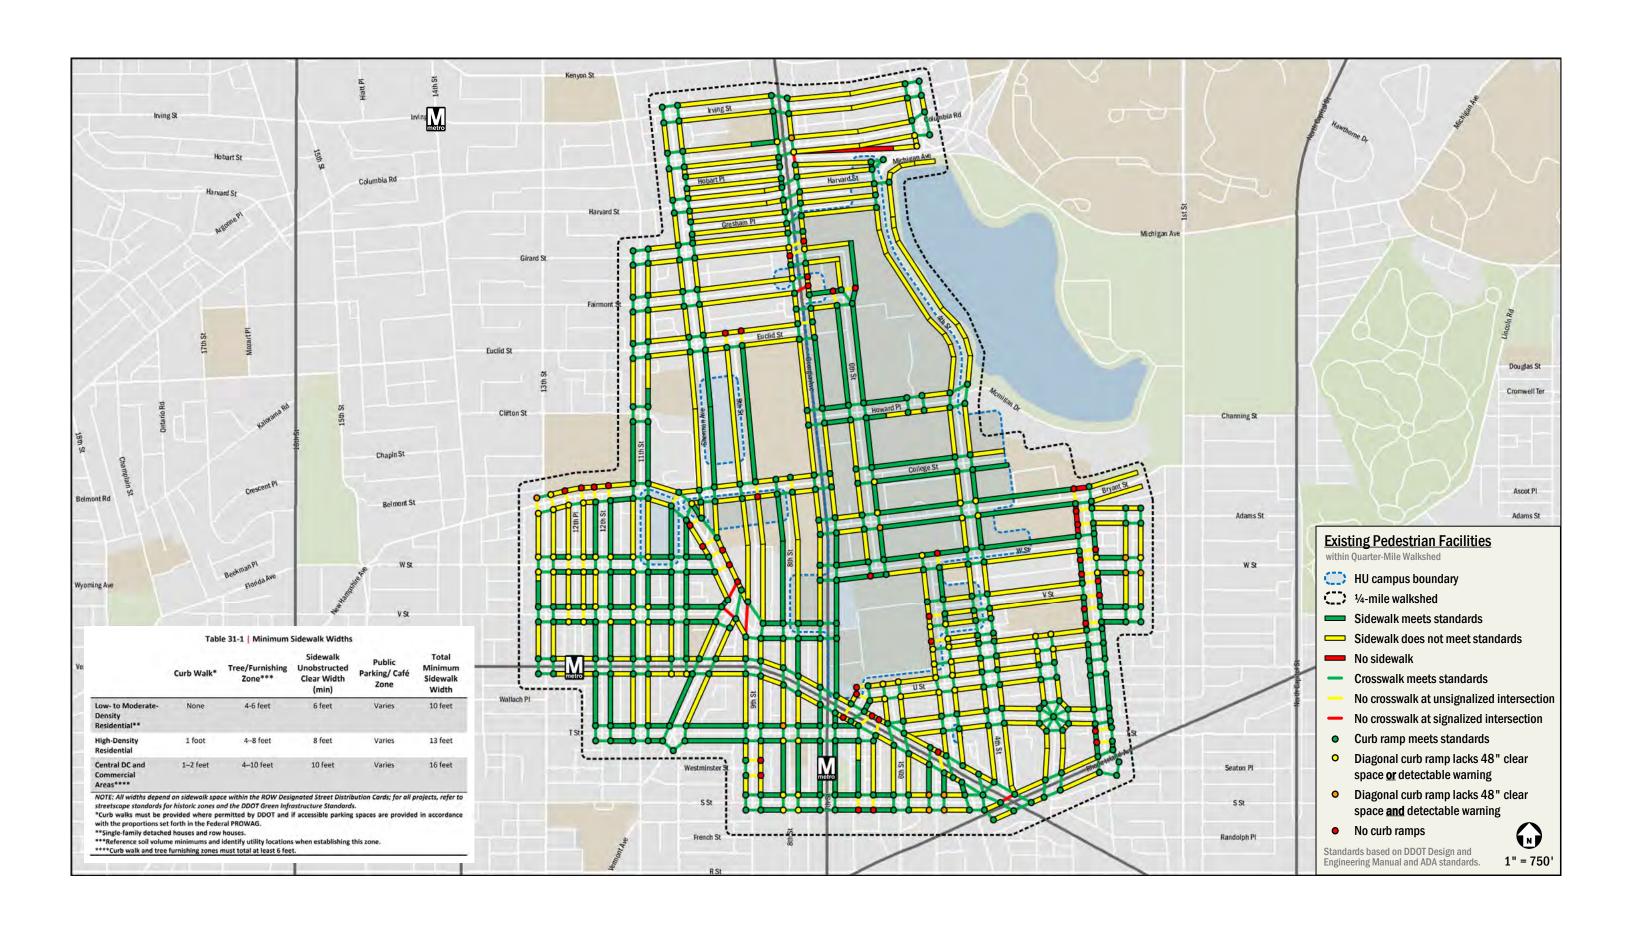

Land Use	Mode	Split		AM Peak Hour		PM Peak Hour						
Land OSE	ivioue	Split	In	Out	Total	In	Out	Total				
Retail	Auto	35%	-19 ppl/hr	-11 ppl/hr	-30 ppl/hr	-58 ppl/hr	-64 ppl/hr	-122 ppl/hr				
Retail	Transit	15%	-8 ppl/hr	-5 ppl/hr	-13 ppl/hr	-25 ppl/hr	-27 ppl/hr	-52 ppl/hr				
Retail	Bike	5%	-3 ppl/hr	-1 ppl/hr	-4 ppl/hr	-8 ppl/hr	-9 ppl/hr	-17 ppl/hr				
Retail	Walk	45%	-23 ppl/hr	-16 ppl/hr	-39 ppl/hr	-76 ppl/hr	-81 ppl/hr	-157 ppl/hr				

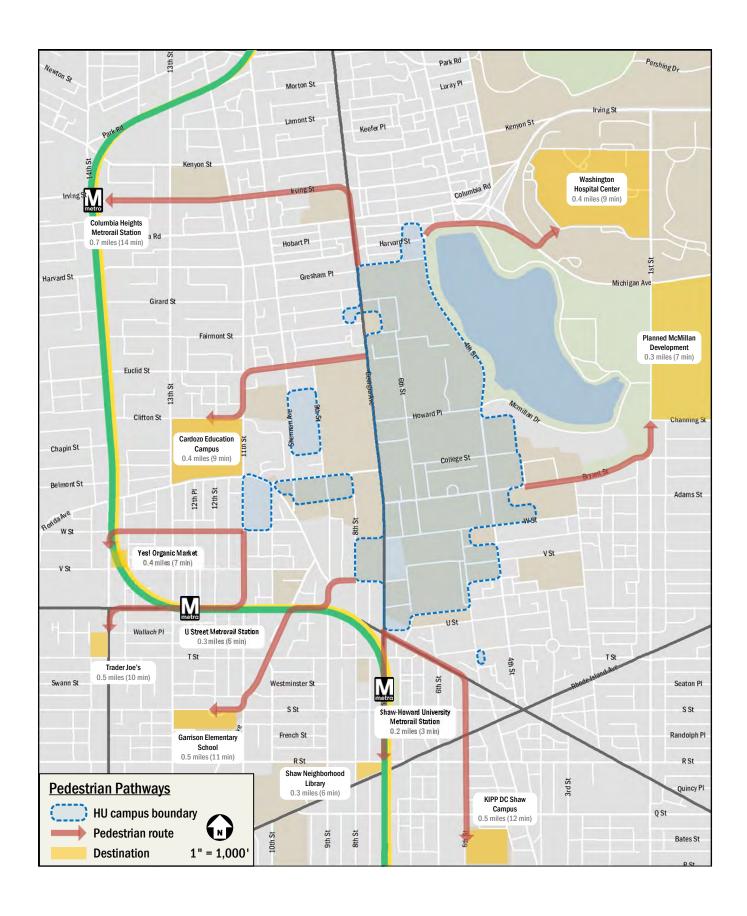

Step 4: Convert auto trips back to vehicles/hour

		In	Out	Total	In	Out	Total
Retail	1.82 ppl/veh	-10 veh/hr	-6 veh/hr	-16 veh/hr	-32 veh/hr	-35 veh/hr	-67 veh/hr

Trip Gen Summary for Proposed Land Uses

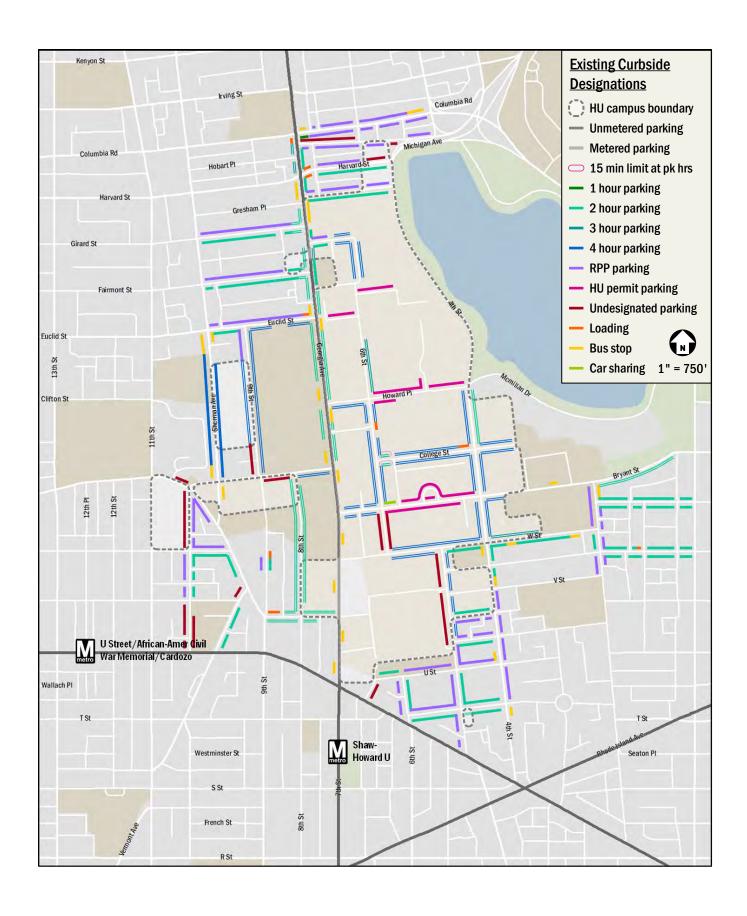

Mode		AM Peak Hour		PM Peak Hour				
Widde	In	Out	Total	In	Out	Total		
Auto	-10 veh/hr	-6 veh/hr	-16 veh/hr	-32 veh/hr	-35 veh/hr	-67 veh/hr		
Transit	-8 ppl/hr	-5 ppl/hr	-13 ppl/hr	-25 ppl/hr	-27 ppl/hr	-52 ppl/hr		
Bike	-3 ppl/hr	-1 ppl/hr	-4 ppl/hr	-8 ppl/hr	-9 ppl/hr	-17 ppl/hr		
Walk	-23 ppl/hr	-16 ppl/hr	-39 ppl/hr	-76 ppl/hr	-81 ppl/hr	-157 ppl/hr

Totals exclude lots without occupancy data.

There are some minor discrepancies on number of spaces in lots per HU-provided data versus occupancy count data. In these cases, the higher number was used in the CTR analysis.

¹ Data collected on 11/20/2019.

EXISTING CONDITIONS SUMMARY

BACKGROUND

The Howard University Campus Master Plan

Howard University's historic Central Campus is the focus of its 2011 Campus Master Plan (HUCMP). Located in Washington DC's Ward 1, and within five miles of the Nation's Capitol, the 118-acre Central Campus is the setting for most of the University's academic and administrative buildings and activities. The Central Campus Master Plan is a strategic tool and guide for the physical development of the campus over the next ten years. The plan is designed to enhance the physical condition of the campus, to create new opportunities for excellence in the future development of new facilities, and to provide the physical framework within which the University can achieve its academic mission.

The transportation element of the HUCMP identifies potential transportation impacts of the plan and provides recommendations to minimize adverse impacts on the surrounding community. The Transportation Demand Management (TDM) Plan provides a detailed assessment of opportunities to mitigate adverse transportation impacts — primarily by enhancing multimodal Central Campus access and mobility for the extended Howard University community.

The TDM Plan is organized as follows:

- 1. Projected Campus Growth An overview of projected physical and demographic expansions planned for the Central Campus in the HUCMP.
- 2. Alternative Mode Infrastructure Assessment - A qualitative summary of the means by which non-driving faculty/staff and students can access Central Campus destinations, plans for improvements, and comparisons to best practices.
