

My concern with these alley lots is whether the city will provide water and sewage hookups for these houses or if the builder will bear that expense. I strongly object to the city using our hard earned tax dollars to carve out the mandated water and sewage systems for these nickel and dime investors of these alley lots, as they disrupt our neighbor and its configuration and contour. As for the lots in Square 4198, I strongly object to any development of housing. It will only add to congestion in the alley and rob current residents of wider access to the rear of their houses when street parking is congested and they must park in the rear. I have owned lot 30 in the alley since the year 1952. We have kept it cut and clean and in good order. It has been very helpful to me, and on occasion my neighbors when utility trucks need places to park or neighbors may need additional off street parking temporarily. However, my main concern is that **I object to any tax dollars going to the aid of developers to build their water and sewer system.**
