SOUND MITIGATION WALL ENGINEERED DETAIL

-Existing demising wall is a 1 hr fire rated wall with 6" batt insulation.

-We construct a 3-5/8" wall to deck in addition to demising wall.

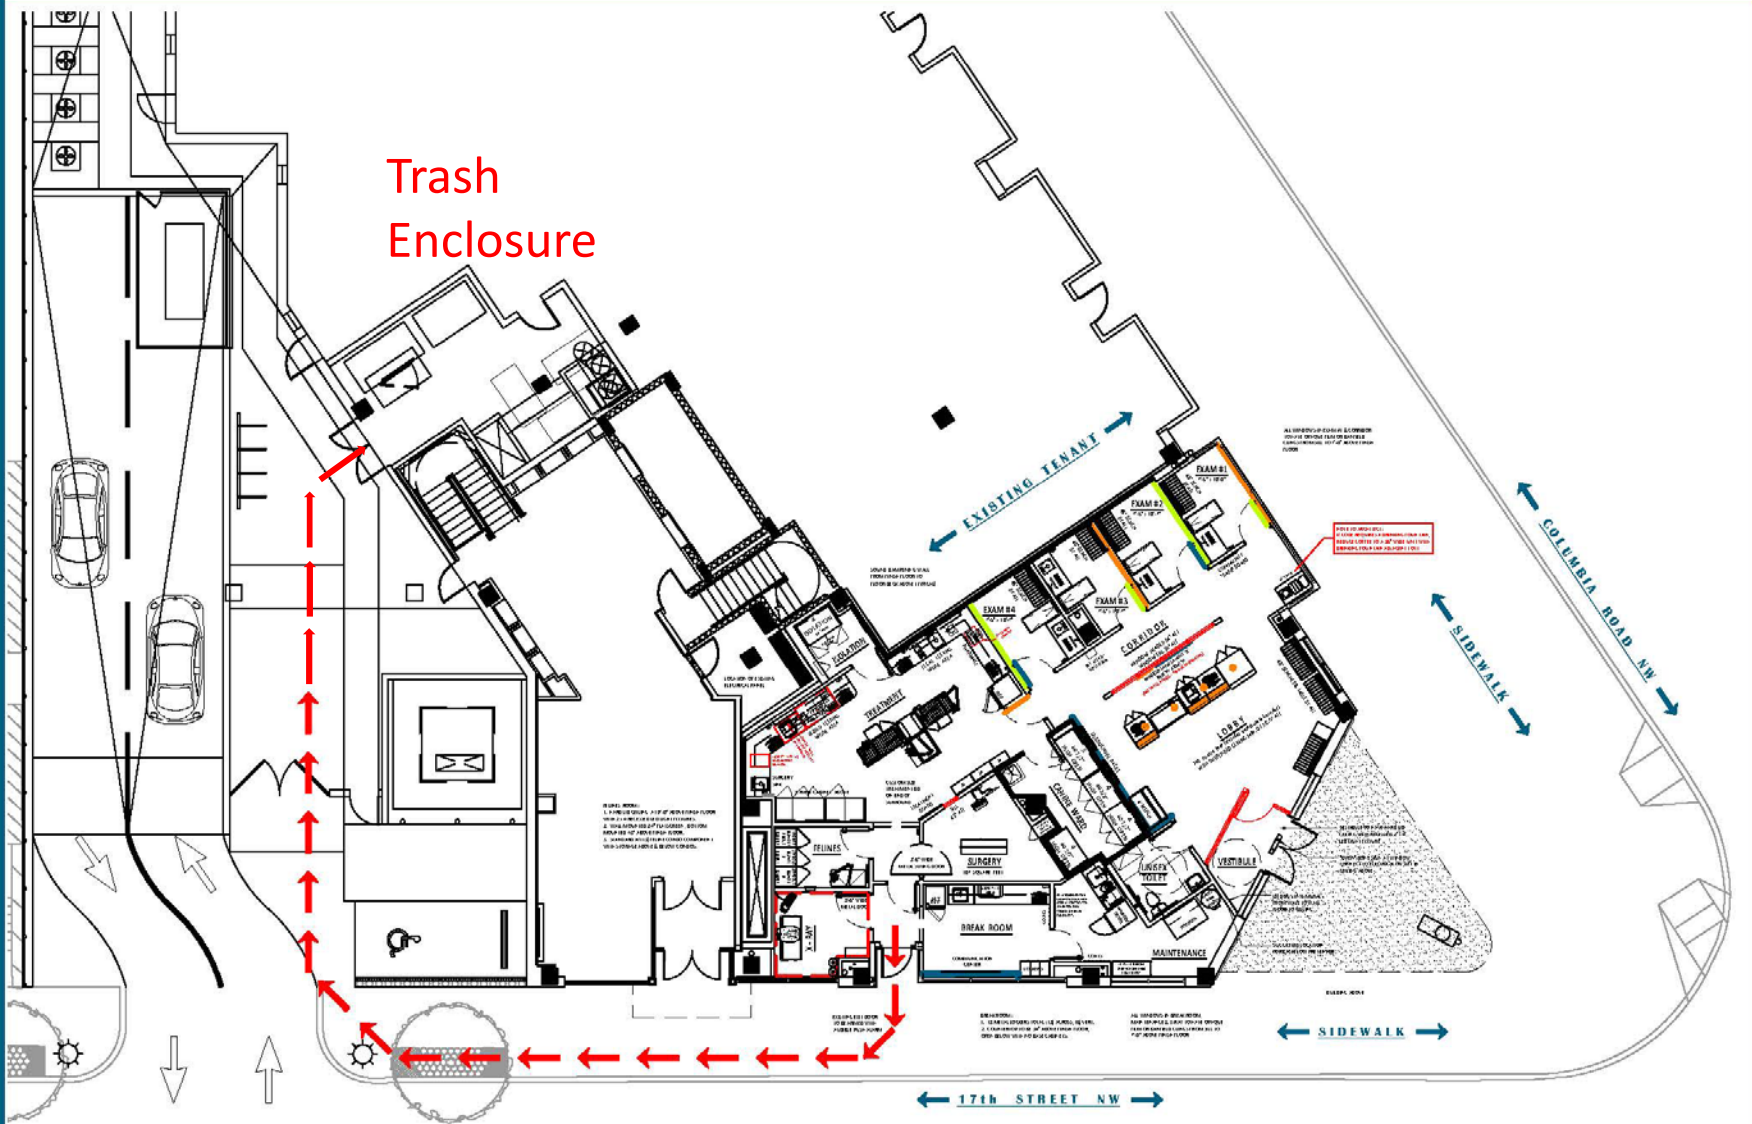

-We provide a 1" air gap that helps capture both high and low frequency sound waves, e.g. barks from large and smaller dogs.

-Additional wall is insulated with 3" batt insulation.

-We use sound dampening sheet rock called Sound Break xp to further eliminate any high decibel level penetration.
