

Healing Garden activation can be achieved through integrated works

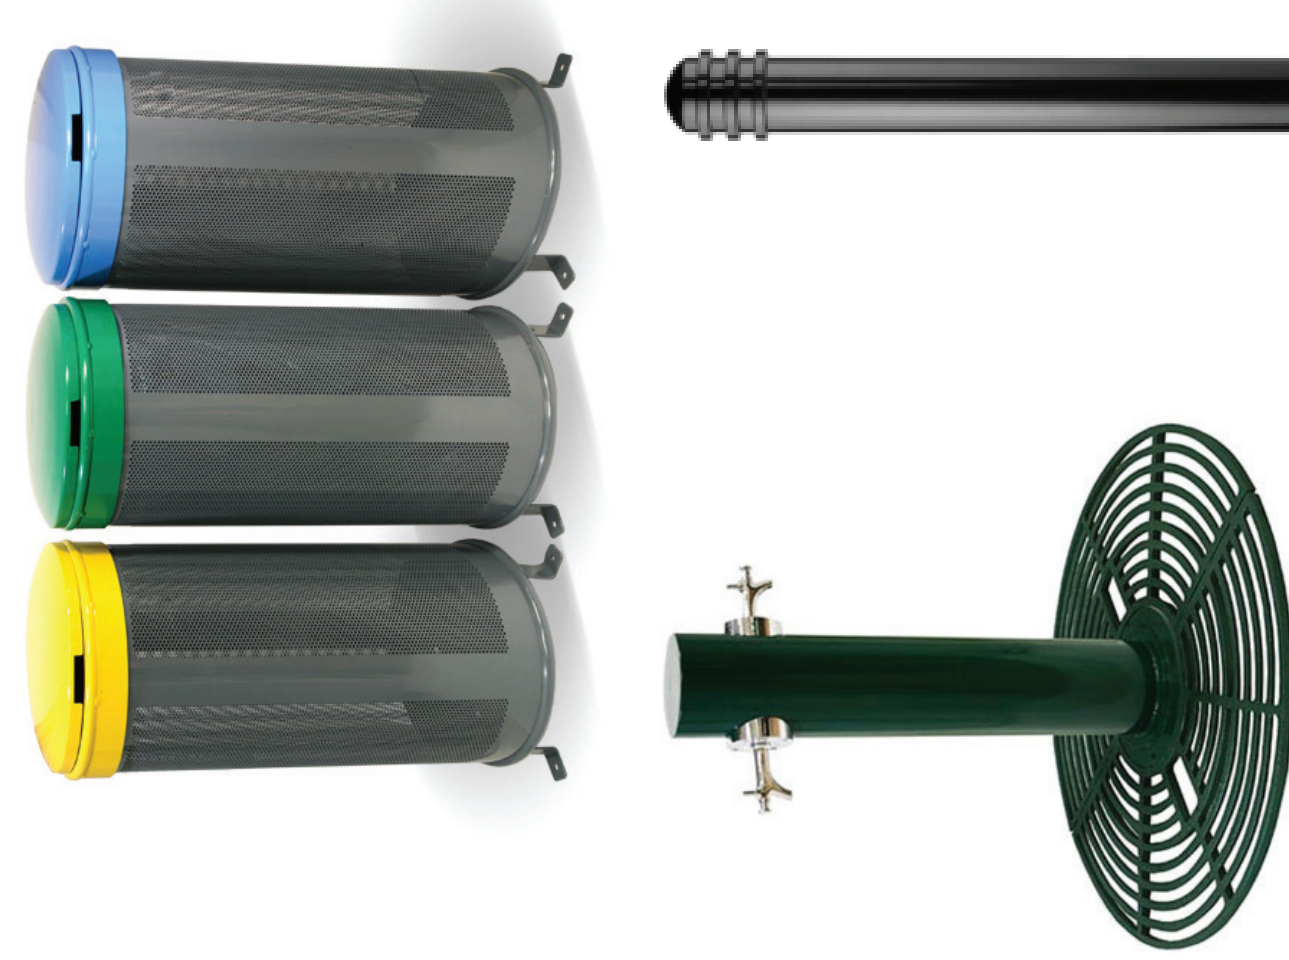

Recycled materials on site can be reinterpreted into sculptures  
Kinetic sculptures can be employed to create dynamic experiences

AESTHETIC INTENTIONS - STREET FURNITURE

These images show street furniture which are serving as inspirations for the ongoing selections for the McMillan project. All benches, trash cans, drinking fountains, bollards etc. will have a similar design aesthetic and use the materials and color palettes being employed by the architecture on the site: woods, metals and concrete. As part of

the public art program for the site, the street furniture, in particular the bicycle racks and public fountains, are seen as great opportunities to explore this aspect of the ongoing design of the public realm.
