

Exhibit B

Future Land Use Map and Generalized Policy Map Designations

Moderate Density Residential: This designation is used to define neighborhoods generally, but not exclusively, suited for row houses as well as low-rise garden apartment complexes. The designation also applies to areas characterized by a mix of single-family homes, two- to four-unit buildings, row houses, and low-rise apartment buildings. In some neighborhoods with this designation, there may also be existing multi-story apartments, many built decades ago when the areas were zoned for more dense uses (or were not zoned at all). Density in Moderate Density Residential areas is typically calculated either as the number of dwelling units per minimum lot area, or as a FAR up to 1.8, although greater density may be possible when complying with Inclusionary Zoning or when approved through a Planned Unit Development. The R- 3, RF, and RA-2 Zone Districts are consistent with the Moderate Density Residential category, and other zones may also apply. 227.6

Medium Density Residential: This designation is used to define neighborhoods or areas generally, but not exclusively, suited for mid-rise apartment buildings. The Medium Density Residential designation also may apply to taller residential buildings surrounded by large areas of permanent open space. Pockets of low and moderate density housing may exist within these areas, Density typically ranges from 1.8 to 4.0 FAR, although greater density may be possible when complying with Inclusionary Zoning or when approved through a Planned Unit Development. The RA-3 Zone District is consistent with the Medium Density Residential category, and other zones may also apply. 227.7

Medium Density Commercial: This designation is used to define shopping and service areas that are somewhat greater in scale and intensity than the Moderate Density Commercial areas. Retail, office, and service businesses are the predominant uses, although residential uses are common. Areas with this designation generally draw from a citywide market area. Buildings are larger and/or taller than those in Moderate Density Commercial areas. Density typically ranges between a FAR of 4.0 and 6.0, with greater density possible when complying with Inclusionary Zoning or when approved through a Planned Unit Development. The MU-8 and MU-10 Zone Districts are consistent with the Medium Density category, and other zones may also apply. 227.12

Neighborhood Enhancement Areas are neighborhoods with substantial amounts of vacant and underutilized land. They include areas that are primarily residential in character, as well as mixed-use and industrial areas. Many of these areas are characterized by a patchwork of existing homes and individual vacant lots, some privately owned and others owned by the public sector or non-profit developers. 'These areas present opportunities for compatible infill development, including new single-family homes, townhomes, other density housing types, mixed-use buildings, and,

where appropriate, light industrial facilities. Land uses that reflect the historical mixture and diversity of each community and promote inclusivity should be encouraged. 225.6

Main Street Mixed Use Corridors. These are traditional commercial business corridors with a concentration of older storefronts along the street. The area served can vary from one neighborhood (e.g., 14th Street Heights or Barracks Row) to multiple neighborhoods (e.g., Dupont Circle, H Street, or Adams Morgan). Their common feature is that they have a pedestrian-oriented environment with traditional storefronts. Many have upper-story residential or office uses, Some corridors are underutilized, with capacity for redevelopment. Conservation and enhancement of these corridors is desired to foster economic and housing opportunities and serve neighborhood needs. Any development or redevelopment that occurs should support transit use and enhance the pedestrian environment, 225.14
