# A: Approved Scope District Department of Transportation (DDOT) Comprehensive Transportation Review (CTR) Scoping Form

# d.

The purpose of the Comprehensive Transportation Review (CTR) study is to evaluate potential impacts to the transportation network that can be expected to result from an approved action by the Zoning Commission (ZC), Board of Zoning Adjustment (BZA), Public Space Committee (PSC), a Federal or District agency, or an operational change to the transportation network. The Scoping Form accompanies the *Guidance for Comprehensive Transportation Review* and provides the Applicant an opportunity to propose a scope of work to evaluate the potential transportation impacts of the project.

**Directions:** The CTR Scoping Form contains study elements that an Applicant is expected to complete in order to determine the scope of the analysis. An Applicant should fill out this *Scoping Form* with a proposed scope of analysis commensurate with the requested action and submit to DDOT for review and concurrence. Accordingly, not all elements and figures identified in the *Scoping Form* are required for every action, and there may be situations where additional analyses and figures may be necessary. Once a completed Scoping Form is submitted, DDOT will provide feedback on the initial parameters of an appropriate analysis scope. DDOT's turnaround times are four (4) weeks for CTRs with a Traffic Impact Analysis (TIA) and three (3) weeks for all other lower tier studies. After the *Scoping Form* has been finalized and agreed to by DDOT, the Applicant is required to expand upon the elements outlined in this Form within the study.

Gorove Slade note: Our comment responses are noted in blue text. Revisions to the originally submitted proposal are highlighted yellow.

Scoping Information		
Date(s) Scoping Form Submitted to DDOT: August 25, 2021, September 28, 2021

	Service/delivery spaces: 1 required, 1 proposed

**Documents to be Submitted to DDOT:** Any action requiring a CTR or some other evaluation of on-site or off-site transportation facilities must submit one of the following documents to DDOT. It must be appropriately scoped for the specific action proposed and document all relevant site operations and transportation analyses.

CTR Study (100 or person total person trips, or 25 or more peak hour vehicle trips in peak direction, or as deemed necessary by DDOT)

Transportation Statement (limited scope based on specifics of project or if Low Impact Development Exemption from CTR and TIA is requested)

Standalone TIA (project proposes a change to roadway capacity, operations, or directionality, has a site access challenge, or as deemed necessary by DDOT)

Other, specify: \_\_\_\_\_

Include one (1) hard copy of final report, PDF of report w/appendices, traffic analysis files, and traffic counts in DDOT-required spreadsheet format (total size of all digital files under 15 MB, if possible)

**Existing Site and Description of Action:** Describe the type(s) of regulatory approval(s) being requested and any background information on the project relevant to the requested action such as the existing uses, amount of vehicle parking, and other notable proposed changes on-site.

The site is located within Square 695, which is bounded by Virginia Avenue SE to the north, New Jersey Avenue SE to the east, Eye Street SE to the south, and South Capitol Street to the west. Of the two lots that comprise the project site, Lot 34 is currently vacant and Lot 31 is currently improved with a car wash use accessed from Eye Street. The proposed project includes removal of the existing car wash and construction of a new multifamily residential building to include:

- Approximately 520 dwelling units
- Vehicular parking
  - Approximately 272 spaces in structured at-grade and above-grade parking facilities within the building,
- Bicycle parking
  - o 112 long-term spaces
  - o 28 short-term spaces
- Loading
  - o One (1) 30' x 12' loading berth
  - One (1) loading platform
  - One (1) 20' x 10' service/delivery space

**Prior Related Action(s), Conditions, and Commitments:** Note any prior approvals by ZC, BZA, or PSC (Campus Master Plan, First Stage PUD, student/faculty cap, etc.) for the site and list all relevant conditions and proffers still in effect from the previous approval and status of completion. Attach a copy of the Decision section from the previous Zoning Order if still in effect.

The Applicant previously received concept approval from DDOT PSC for the proposed right-in/right-out access from South Capitol Street, which is described in further detail in the Site Access section of this form. At the time that approval was granted, the Applicant controlled only the undeveloped Lot 34 portion of the property, which could only be accessed from South Capitol Street. The Applicant is seeking to maintain this access with the proposed inclusion of Lot 31 which will allow for additional outbound only vehicular access to Eye Street as well as separated pedestrian and bicycle pathways.

# Section 1: SITE DESIGN

DDOT reviews the site plan to evaluate consistency with DDOT's standards, policies, and approach to access as documented in the most recent Design and Engineering Manual (DEM). If the proposal for use of public space is found to be inconsistent with the agency approach, DDOT will note this regardless of its relevance to the action. It is DDOT's position that issues regarding public space be addressed at the earliest possible opportunity to ensure the highest quality project design and to minimize project delays and the need to re-design a site in the future.

# **CATEGORY & GUIDELINES**

# Site Access

Show site access points for all modes. Include proposed curb cut locations, curb cuts to be closed, access controls (e.g., right-in/out, signalized), sight distances and sight triangles from access points and new intersections, driveway widths and spacing, on- and off-site parking locations, inter-parcel connections, public/private status of driveways, alleys, and streets, and whether easements, dedications, or closures are proposed.

Access must be located off an adjacent existing or "paper" alley, otherwise off the lower volume street. Note any deviations from curb cut policies (DEM 31.5) w/justification and if Conceptual Approval by the Public Space Committee (PSC) has/is being sought. Subtitle I § 600-603 of ZR16 further restricts where curb cuts can be located.

DDOT will not support curb cut design relief unless there is a clear hardship preventing a project from meeting all DDOT standards and other alternatives have been explored.

All proposed private streets connecting to a public street must be built to DDOT standards and have a public access easement. Design of

Pedestrian access is proposed to be provided via primary and secondary lobbies along South Capitol Street, as well as a dedicated pedestrian connection pathway along the site's access drive connection to Eye Street SE.

CONSULTANT PROPOSAL

Bicycle access is proposed to be provided via a dedicated bike lane along the site's access drive connection to Eye Street SE that will lead to a bike storage room in Level 1 of the garage. The site is located adjacent to the existing bike lanes on Eye Street SW/SE and is located 0.2 miles from the bike lanes on First Street SE and the protected bike lanes on New Jersey Avenue SE.

Primary vehicular access to the site will be provided via the proposed right-in/right-out driveway located along northbound South Capitol Street via a new curb cut near the existing curb cut which would be removed. Additional vehicular egress is proposed (for residential traffic only) leaving the site from the garage via the existing connection from Lot 31 to Eye Street. This driveway would be reconfigured to serve outbound residential traffic only as well as provide dedicated pedestrian and bicycle lanes. It is noted that if this driveway were to serve inbound and outbound vehicular traffic, there would not be sufficient space to provide the proposed pedestrian pathway and bicycle lane. The lane could not be widened beyond the existing 20 feet due to the existing building to the west and lot line to the east. Further, it would not be possible for vehicles that turn onto the driveway to turn around without entering the secured parking garage. Therefore, if inbound access were provided along this connection, it could result in a dead-end condition for vehicles that may accidentally turn onto the driveway that do not have access to the secured garage.

- The South Capitol Street access is proposed to be right-in/right-out and will serve the project's loading facilities, parking garage, and a dedicated pick-up/drop-off area for ride-hailing and deliveries. The proposed South Capitol Street access previously received concept approval from DDOT PSC.
- The Eye Street SE access is proposed to be one-way southbound, serving only resident egress from the parking garage. This drive aisle is approximately 20-feet wide and would be reconfigured to provide a pedestrian pathway, a bicycle lane and a southbound (egress only) vehicular travel lane.

**DDOT COMMENTS** 

DDOT 9.24.21: The CTR should provide relevant information and analysis to support to the curb cut to South Capitol and access/circulation scheme. Applicant must demonstrate how the curb cut would or would not conflict with the future design of the ramps & existing bridge piers, including site lines, and intersection spacing. DDOT's preference is for site access to be via the lower classification roadway (I Street) with alley access preferable. The proposed alley/driveway accessing the site is wide enough for two opposing vehicles to pass one another and traffic volumes in the alley should be low enough that conflicts with cyclist and pedestrians would be minimal. Please provide additional justification for why access directly to South Capitol Street is needed.

Vehicle Parking Identify all off-street parking locations (on- and off-site) and justify the amount of on-site vehicle parking, including a comparison to the		Downtown					ng. Vehicle parking is no .6 requirement would	t DDOT 9.24.21: DDOT's preferred parking max for this area in the 2019 Guidelines is 0.40/spaces per unit, which would yield 208 spaces. Update this information in the table to the
number of spaces required by ZR16 and any previous approvals. Provide parking calculations and parking ratios by land use, including any eligible ZR16 vehicle parking reductions (i.e.,	Land Use	Size	ZR16 require spaces		ıtside	Proposed spaces E	Excess spaces	left.

# CSX West Parcel (Square 695) – 8/25/2021, DDOT 9.24.21, GS Responses 9.28.2021, FINAL 9.30.21

within ¼ mile of Priority Bus Route, within ½ mile of Metrorail Station, providing carshare spaces, located within a D zone, etc.).	
Review the DDOT Preferred Parking Rates (Table 2). If the total parking provision proposed exceeds the amount calculated using ratios in that table then the number of spaces should be reduced or substantial TDM / non-auto improvements be provided. If parking provision is significantly out of line with appropriate parking ratios, one way or the other, then mode split and trip generations estimates will be adjusted.	
Confirm whether ZR16 TDM Mitigations will be required, per Subtitle C § 707.3, for providing more than double the amount of required vehicle parking. Coordinate with the Zoning Administrator as early in the process as possible for an official determination.	[
A TDM Plan is required for BZA parking	

reduction cases, per Subtitle C § 703.4. If relief is being requested from 5 or more spaces, then a Parking Occupancy Study is required (see Multi-Modal section).

# Bicycle Parking

Identify the locations of proposed bicycle parking and justify the amount of long- and short-term spaces proposed. Provide a calculation of the number of spaces required by ZR16.

Long-term bicycle parking spaces must be easily accessible from building lobby or located in the parking garage level closest to the ground floor. Lockers and showers must be included with nonresidential long-term bicycle storage rooms, per Subtitle C § 806. Provide calculations for required lockers and showers.

Short-term bicycle parking must be accommodated by installing inverted U-racks along the perimeter of the site in the 'furniture zone' of public space, near the site entrance(s).

Streetscape and Public Realm

Provide a conceptual layout of the streetscape and public realm including at minimum: curb cuts, vaults, sidewalk widths, street trees, grade changes, building projections, short-term bicycle parking, and any existing bus stops. Also provide the permit tracking numbers and PSC

🖾 Scoping Graphic: Locations of internal bicycle parking spaces, routing to these spaces, and related support facilities including locker rooms, showers, storage areas, and service repair rooms

The Applicant will work with DDOT to ensure the design of the public realm meets current standards. A preliminary public space concept will be provided in the CTR.

DDOT 9.24.21: The amount of parking is more substantial than the DDOT would like to see. Why would 296 spaces be needed if the drive mode split is 296 spaces? DDOT encourages the Applicant to reduce the supply of parking if feasibly possible. One way to do this is by making the long-term bicycle room larger. To help offset induced demand from the parking supply, start with an Enhanced TDM plan and additional items, such as physical bike/ped improvements and other TDMs should be included.
GS response: The proposed parking supply has been reduced from 296 to 272 in this updated scoping form, which will be reflected in the CTR. The CTR will propose a robust TDM program to include Baseline + Enhanced + Additional measures to mitigate the proposed parking supply.
DDOT 9.30.21: Acknowledged. DDOT's comments have been addressed.
DDOT 9.24.21: DDOT encourages the Applicant to provide additional long- term bicycle parking than required by ZR16 given that many new buildings have waitlists. Consider converting some vehicle parking to bike parking space. Any additional bike parking over zoning will be credited in the TDM plan and help offset the over- vehicle parked condition.
GS response: The Applicant will be proposing to include additional bicycle parking beyond the minimum requirement, with the total amount to be determined at a later date.
DDOT 9.30.21: DDOT strongly supports this. DDOT 9.24.21: Will continue to

GS response: Noted.

coordinate on streetscape and any

bike trails along the frontage.

hearing date, if known, for any approved public space designs.		
DDOT expects new developments to rehabilitate the streetscape between the curb and property line and meet all public space design standards. Streetscape must meet ADA requirements and ensure nothing impedes accessible curb access or pedestrian circulation.	Scoping Graphic: Preliminary Public Space Concept	
Note any non-compliant public space elements requiring a DCRA code modification or PSC approval.		
A summary of public space best practices is provided in Section 1.5. DDOT standards are documented in the DEM, Public Realm Design Manual, and corridor Streetscape Guidelines (if applicable).		
Sustainable Transportation	Sustainable transportation elements for this development will be discussed in the CTR. Five (5) electric vehicle	DDOT 9.24.21: DDOT encourages the
Elements	charging stations will be included on site.	Applicant to provide at least 1 station per 50 parking spaces. Also be aware
Identify all sustainable transportation elements, such as electric vehicle (EV) charging stations and carshare spaces proposed to be included in the project. Electrical conduit should be installed in parking garage so that additional EV stations can be provided later.		that DCRA/DOEE will start to require 20% of parking spaces be EV ready starting Jan 1, 2022. GS response: This updated scoping form includes 5 electric vehicle
DDOT recommends 1 per 50 vehicle spaces be served by an EV station. DDOT encourages providing car share spaces on-site to reduce the ZR16 parking requirement and support non-car ownership lifestyles.		charging stations. DDOT 9.30.21: DDOT strongly supports this.
Heritage, Special, and Street	The applicant will work with UFD to determine if there are any Heritage or Special Trees on-site. A screenshot	DDOT 9.24.21: DDOT concurs.
Trees	from UFD's street tree website is included in the attachments.	GS response: Noted.
Heritage Trees are defined as having a circumference of 100 inches or more and are		
typically located on private property. They are protected by the District's Tree Canopy Protection Amendment Act of 2016 and must be preserved if deemed non-hazardous by Urban		
Forestry Division (UFD). Special Trees are between 44 inches and 99.99 inches in circumference and may be removed with a permit.		
Note whether there are existing Heritage Trees on-site or in adjacent public space. The presence of Heritage Trees will impact site design since they may not be cut down. Work w/the UFD Ward Arborist to determine if there are Heritage or Special Trees on-site that must be preserved	Scoping Graphic: Street Tree Inventory Study Area	

#### CSX West Parcel (Square 695) – 8/25/2021, DDOT 9.24.21, GS Responses 9.28.2021, FINAL 9.30.21

and if Tree Preservation or Relocation Plans are	
required.	
Conduct an inventory of existing and missing	
street trees within a 3-block radius of the site	
(design standards are in DEM 37.5). Identify any	
opportunities for UFD or the Applicant (as part	
of the mitigations package) to install missing	
treeboxes and street trees.	

# Section 2: TRAVEL ASSUMPTIONS

#### **CATEGORY & GUIDELINES DDOT COMMENTS** CONSULTANT PROPOSAL DDOT 9.24.21: DDOT concurs. Mode split assumptions are based on CTTP census data, the District of Columbia's State of the Commute data, Mode Split and WMATA ridership surveys. The mode split assumptions for the project are as follows: Provide mode split assumptions with sources GS response: Noted. and justification. Sources of data could include the most recent Census Transportation Planning Mode Land Use Products (CTPP) the 2005 WMATA Transit Bike Walk Drive Development-Related Ridership Survey, or previous planning studies and CTRs. Note that Residential 35% 40% 5% 20% the walking mode share will account for internal trip synergies for mixed use developments. Adjustments to mode split assumptions may be Scoping Table: Mode Split Assumptions made, as appropriate, if the number of vehicle parking spaces proposed is significantly lower or higher than expected for the context of the neighborhood. The agreed upon mode split assumptions may not be revised between scoping and CTR submission without DDOT concurrence. Multi-modal trip generation was calculated using ITE Trip Generation 10th Edition rates for Land Use 222 DDOT 9.24.21: please include a row **Trip Generation** for person trips (Step 2 from trip gen Multifamily Housing (High-Rise) using the mode splits listed above. Provide site-generated person trip generation table) and a column for Saturday peak estimates, utilizing the most recent version of hour trips. ITE Trip Generation Manual or another agreed The ITE trip generation for the proposed project is shown below and included in the attachments. upon methodology such as manual doorway or GS response: Noted; the table has driveway counts at similar facilities. Estimates AM Peak Hour PM Peak Hour **Saturday Peak Hour** been updated. Mode must be provided by mode, type of trip, land In Out Total In Out Total In Out Total use, and development phase during weekday DDOT 9.30.21: DDOT's comment has 120 Person trips (ppl/hr) **45** <mark>141</mark> 186 133 85 218 <mark>98</mark> 218 AM and PM commuter peaks, Saturday mid-day been addressed. Scoping Table: Multi-Modal Trip Gen Summary (w/mode split and applicable reductions, as appropriate)

Auto occupancy rates by travel purpose published in the 2017 National Household Travel Survey should be used when calculating person

#### CSX West Parcel (Square 695) – 8/25/2021, DDOT 9.24.21, GS Responses 9.28.2021, FINAL 9.30.21

trips based on suburban vehicle trip data in Trip Generation Manual (see Table 3). Adjustments to trip generation may be made, as appropriate, if the number of vehicle parking spaces proposed is significantly lower or higher than expected for the context of the neighborhood.	
Pass-by rates in the District are minimal and should only apply to major retail-dominant destinations, grocery stores, and gas stations. An adjusted pass-by/diverted trips methodology should be developed if development is not located on a road classified as arterial or higher.	
The agreed upon trip generation methodology may not be revised between scoping and CTR submission without DDOT concurrence. Consult the DDOT Case Manager if site plan, development program, land uses, or density changes significantly.	

# Section 3: MULTI-MODAL NETWORK EVALUATION

A CTR study is required if the project generates at least 100 peak hour person trips or 25 vehicle trips in the peak direction (highest of inbound or outbound) in any study period. Existing site traffic, pass-by, TDM, internal capture or other reductions may not be taken in the calculation to determine if the project meets these thresholds. However, they may be taken in the TIA, as appropriate, if a study is triggered. Analyses in the Multi-Modal Network Evaluation section are required in all CTRs, unless otherwise specified. A Transportation Statement may only require some of the following sections depending on the specifics of the project and zoning action.

The requirement for a CTR may be waived if site is within ½ mile from Metrorail or ¼ mile from Priority Transit, the total vehicle parking supply below level expected within ¼ mile of Metrorail Station (see Table 2), maximum 100 parking spaces, an Enhanced TDM Plan is implemented, site access and loading design are acceptable, there is a complete pedestrian network in the vicinity of the site, and meets all ZR16 bike parking and locker/shower requirements. Additional criteria may be found in the Low Impact Development Exemption section of *Guidance for CTR*.

CATEGORY & GUIDELINES	CONSULTANT PROPOSAL	DDOT COMMENTS
<b>Strategic Planning Elements</b> Identify relevant planning efforts and demonstrate how the proposed action is consistent with District-wide planning documents, as well as localized studies. Note in scoping form any recommendations from these documents relevant to the development proposal.	<ul> <li>The CTR will consider the suggested studies included in the column to the left in addition to the following studies located near the development:</li> <li>South Capitol Street Project</li> <li>M Street SE-SW Transportation Study</li> <li>Navy Yard/Capitol Riverfront Safety Assessment</li> </ul>	DDOT 9.24.21: DDOT concurs. GS response: Noted.
The evaluation will consider at least the following high level/District-wide documents:		
<ul> <li>MoveDC and its relevant modal elements</li> </ul>		
<ul> <li>DDOT Livability Study (relevant to the project)</li> </ul>		
<ul> <li>OP Small Area Plans (relevant to the project)</li> </ul>		
<ul> <li>DC Highway Plan (shown on official plat)</li> </ul>		

<ul> <li>District of Columbia Comprehensive Plan</li> </ul>		
<ul> <li>Vision Zero Action Plan</li> </ul>		
<ul> <li>Capital Bikeshare Development Plan</li> </ul>		
<ul> <li>Washington Metropolitan Area Transit Authority's (WMATA) Metrorail and Metrobus Plans</li> </ul>		
<ul> <li>DDOT Corridor studies (e.g., Transit Development Plan, Streetscape Design Plans and Guidelines)</li> </ul>		
Details on additional relevant plans and studies may be provided by the DDOT Case Manager.		
Pedestrian Network	The study will review pedestrian walking routes to and from the site along with an assessment of facilities along these walking routes and on all pedestrian facilities within ¼ mile of the site following section 3.2 of DDOT's CTR	DDOT 9.24.21: DDOT concurs.
Evaluate the condition of the existing pedestrian network and forecast the project's impact. Evaluation must include, at a minimum, critical walking routes, sidewalk widths, network completeness, whether facilities meet DDOT and ADA standards, and whether pedestrian signal timings are adequate (within vehicle study area).	guidelines, plus additional walking routes to major destinations. The assessment will evaluate whether facilities meet DDOT and ADA standards.	GS response: Noted.
Study area will include, at a minimum, all roadway segments and multi-use trails within a ¼ mile radius from the site, with a focus on connectivity to Metrorail, transit stops, schools, and major activity centers.		
<b>Bicycle Network</b> Evaluate the condition of the existing bicycle network and forecast the project's impact, including to Capital Bikeshare (CaBi). Evaluation must include, at a minimum, bicycle network completeness, types of facilities, and adequacy of CaBi locations and availability. Bikeshare station demand data can be obtained from the <i>CaBi Tracker</i> website.	The bicycle study area focuses on the routes that cyclists will take to and from major bicycle facilities. We will also highlight the internal bicycle circulation and facilities. A review of existing and planned bicycle facilities serving the site within a ½ mile will be included with an assessment of connections between the site and major facilities, including a qualitative review of how cyclists going to and from the site will access major facilities (paths, bike lanes, etc.). The review of bicycle facilities will follow DDOT's CTR guidelines found in section 3.3.1.	DDOT 9.24.21: DDOT concurs. GS response: Noted.
Study area will include, at a minimum, all roadway segments and multi-use trails within a ½ mile radius from the site, with a focus on connectivity to Metrorail, transit stops, schools, major activity centers, and other bicycle trails or facilities.		
Note where bike lanes conflict with access to the site or on-street loading movements associated with the project.		
If a CaBi station is currently located along the site frontage, the Applicant must assume the station will stay in place after the development has been constructed and must be designed in the public space plans. If it is not physically	Scoping Graphic: Bicycle Study Area w/Bicycling Routes to Transit, Schools, Activity Centers	

# A: Approved Scope CSX West Parcel (Square 695) – 8/25/2021, DDOT 9.24.21, GS Responses 9.28.2021, FINAL 9.30.21

possible to stay in place, then DDOT expects the Applicant to demonstrate this hardship, propose a viable alternative location, and fund the station relocation. The minimum size of a new CaBi station is 19 docks with 12 bikes.		
Transit NetworkEvaluate, at a minimum, existing transit stoplocations, adjacent bus routes and Metroheadways, planned transit improvements, andan assessment of existing transit stop conditions(e.g., ADA compliance, bus shelters, benches,wayfinding, etc.). For Metrorail stations, refer tothe 2009 WMATA Station Site and AccessPlanning Manual, as well as various stationcapacity studies.Study area is 1.0 mile for Metrorail stations and½ mile for Streetcar, Circulator, and WMATAbuses.All existing bus stops and shelters must beaccommodated during construction, assumed tobe returned to the original location afterconstruction, and designed into the public spaceplans. If a bus stop and/or shelter must bemoved then the Applicant will fund therelocation and obtain approval from DDOT andWMATA for the new location. Applicant mustfund the electrification of all new or relocatedshelters.	The study will discuss transit routes and schedules, including headway and span of service for Metrorail stations within one (1) mile of the site and for WMATA bus stops within ½ mile of the site. The study will evaluate the sufficiency of the identified services and access to those services from a qualitative standpoint. Additionally, transit stop locations will be evaluated. Any planned transit improvements will be included in the report. This study will not include a quantitative study of boarding and alighting volumes at specific transit stops. All transit network evaluations will follow guidance as outlined in section 3.4 of DDOT's CTR guidelines.          Scoping Graphic:       Transit Study Area with Adjacent Routes and Stations         Scoping Graphic:       Screenshots from DDOT transit maps showing where the site falls within buffers from Metrorail and Priority Transit	DDOT 9.24.21: DDOT concurs. GS response: Noted.
Safety Analysis Qualitatively evaluate safety conditions at intersections and along blocks within the vehicle study area. Perform a review of DDOT Vision Action Plan. Note whether any study intersections have been identified by DDOT as high crash locations, if any safety studies have been previously conducted, and discuss the recommendations. Depending on the results of the TIA, DDOT may require improvements to nearby intersections previously identified as having known safety issues.	A qualitative evaluation of safety conditions within the proposed study area will be included in the CTR following the guidance set forth in section 3.6 of DDOT's CTR guidelines.	DDOT 9.24.21: Please include sight triangles for proposed curb cut to S. Capitol Street. DDOT 9.24.21: What is the expected spacing between the site access point and the future signalized intersection to the north? A significant portion of site generated trips are expected to make the left turn onto the I-395/695 ramps. TESD is concerned about the potential of egressing vehicles blocking through travel lanes attempting to make the northbound left turn movement. GS response: Sight triangles will be provided in the CTR. The expected spacing between the site access point and the stop bar of the future signalized intersection to the north is approximately 75 feet. DDOT 9.30.21: Acknowledged

10

Curbside Management	No changes to curbside management are proposed as part of this project.	DDOT 9.24.21: Noted.
Propose a curbside management plan that is consistent with current DDOT policies and practices. The curbside management plan must delineate existing and proposed on-street parking designations/restrictions, including but not limited to pick-up/drop-off zones, commercial loading zones, multi-space meters, RPP, and net change in number of on-street spaces as a result of the proposal. Note that the preliminary curbside management plan will not be approved by DDOT during the zoning process. Applicant must submit a more detailed signage and marking plan via TOPS for formal review and approval by DDOT expects the Applicant to fund the installation of multi- space meters on blocks where meters are required.	Scoping Graphic: Existing Curbside Designations (min. 2 block radius of site)	GS response: Noted.
Pick-Up and Drop-Off Plan This plan is required for all schools and daycares with 20 or more students. It may also be required for churches, hotels, or any other use expected to have significant pick-up and drop-off operations, as necessary. The plan will identify pick-up and drop-off locations and demonstrate adequate circulation so that the flow of bicycles and vehicles is not impeded and queueing does not occur through the pedestrian realm. DDOT will require this plan for schools and daycares currently in operation even if the relief requested from the BZA is not related to a student cap increase.	A pick-up/drop-off plan is not necessary. The intensity of the development program is not expected to have significant pick-up and drop-off operations. Further, the proposed plan includes a residential pick-up/drop-off area on-site and out of the public space that will be accessed via the proposed driveway along northbound South Capitol Street.	DDOT 9.24.21: DDOT acknowledges the propose site layout including a pick-up/drop-off loop, parking spaces, and bollards. Since it is located under the Interstate it is subject to review by the Public Space Committee and will require a recommendation of approval by IPMD's bridge engineers. Typically, this type of permanent construction in the DDOT ROW and so close to bridge pillars is not permitted, especially for storage of personal vehicles. GS response: Only paved surface, and other surface improvements, are proposed within the private property covering the easement. DDOT 9.30.21: Acknowledged. We will continue discussing this through zoning and public space – both the design and legal applicability of the easement. Our bridge engineers have stated that some paving can occur under the Interstate (Public Space Committee's thoughts are TBD on that) but parking is not permitted under the Interstate or close to the
On-Street Parking Occupancy Study	Zoning relief for parking is not being sought, therefore this section is not applicable.	bridge piers. DDOT 9.24.21: DDOT concurs. GS response: Noted.

#### CSX West Parcel (Square 695) – 8/25/2021, DDOT 9.24.21, GS Responses 9.28.2021, FINAL 9.30.21

more on-site vehicle parking spaces is being requested. It may also be required as part of a ZC or permitting case if DDOT has concerns about site-generated vehicles parking in adjacent residential neighborhoods. Vehicle parking occupancy counts will be collected hourly during periods of peak demand. These are typically the weekday evening period (C 10 PM) for residential deviated evening period	Scoping Graphic: Study Area/Block Faces	
(6-10 PM) for residential developments, weekday morning period (7-9 AM) if within ¼ mile of Metrorail, and weekend peak periods if there is a commercial component. Parking availability must be assessed a maximum of 2 blocks in each direction from the site, unless otherwise agreed upon. Also include inventory of off-street parking garages in vicinity of site.		
Parking Garage Queueing Analysis If site contains 150 or more vehicle parking spaces <u>and</u> direct access to a public street, evaluate on-site vehicle queueing demand and provide analysis demonstrating parking entrance and ramps can properly process vehicles without queuing onto public streets. Provide proposed parking supply, queuing analysis, and physical controls to parking area, if applicable.	The proposed garage does not have direct access to a public street as the distance from the garage door to the curb line at Eye Street SE is approximately 300 feet; therefore this section is not applicable.	DDOT 9.24.21: DDOT concurs. GS response: Noted.
<b>Motorcoaches</b> Propose methodology for data collection and analysis. Describe and show the parking locations, anticipated demand, existing areas on- and off-site for loading and unloading (and desired loading times restrictions, if any), and potential routes to and from designated truck routes. If on-street motorcoach parking is proposed, a plan for installation of signage and meters is required, subjection to DDOT-PGTD approval. This section is typically only required for uses that generate significant tourist activity (hotels, museums, cruises, etc.).	No motorcoach activity is anticipated at the site.	DDOT 9.24.21: DDOT concurs. GS response: Noted.

The TIA component of a CTR is required when a development generates 25 or more peak hour vehicle trips in the peak direction (higher of either inbound or outbound vehicles in any study peak period), after mode split is applied. Existing site traffic, pass-by, TDM, internal capture or other reductions may not be applied when calculating whether a TIA is required. Applicable reductions may be used in the multi-modal trip generation summary and assignment of trips within the TIA, as appropriate. A standalone TIA may also be required if the project proposes a change to roadway capacity, operations, or directionality; has a site access challenge; or as otherwise deemed necessary by DDOT.

**CATEGORY & GUIDELINES** 

# **CONSULTANT PROPOSAL**

# **DDOT COMMENTS**

TIA Study Area and Data	The following intersections are proposed to be evaluated in the study:	DDOT 9.24.21: Include the signalized
<b>IIA Study Area and Data</b> <b>Collection</b> Identify study intersections commensurate with the impact of the proposed project and the travel demand it will generate. Study area must include all major signalized and unsignalized intersections, intersections expected to realize large numbers of new traffic, and intersections that may experience changing traffic patterns. Additional guidance on selecting study intersections is provided in DEM 38.3.2. <i>Turning Movement Counts (TMC) will be</i> collected in 15-minute increments during the weekday morning (6:30 AM to 9:30 AM) and evening (4:00 PM to 7:00 PM) peak periods on <i>Tuesdays through Thursdays during non-holiday</i> weeks, while schools and Congress are in session, the Fed govt is not in a shutdown, and weather is not an issue, unless otherwise agreed upon. Saturday mid-day peak period (generally 11:00 AM to 1:00 PM) will be studied if development program is retail-heavy. TMCs will include vehicles, pedestrians, bicyclists, and % truck traffic. TMCs will be collected at all existing site driveways and reported as existing conditions in trip generation summary. Previously collected TMCs may be used if they are less than 2 years old at the time of study submission. DDOT may require counts be refreshed once TMCs reach 3 years old or if a major transportation or land use change occurs. A growth rate will be applied to TMCs older than 12 months to create present year Existing	<ul> <li>I. Proposed RIRO Site Driveway &amp; South Capitol St</li> <li>2. <ul> <li>necessary</li> <li>Total Future Conditions (+5 Years), as required</li> </ul>		

<ul> <li>Long Range +20 Years Planning Scenario, as required</li> </ul>		
<b>TIA Methodology</b> Propose an appropriate methodology for the capacity analysis including the type of software program to be used. Per DEM 38.3.5.1, HCM methodology will be used to determine Level of Service (LOS), v/c, and vehicle queue lengths. LOS must be reported by intersection approach and v/c by lane group. DDOT prefers Synchro 9 or newer software for capacity and queueing analyses. SimTraffic (10 simulations averaged) should be used to further evaluate an observed queueing issue and determine a solution, as necessary.	Capacity analyses will be performed using Highway Capacity Manual (HCM) methodologies using an industry recognized software package. We propose performing the analysis in Synchro 10 and reporting the results in delay and LOS using HCM 2000 methodologies. We propose to analyze the weekday morning and afternoon commuter peak hours, using the individual peak hours at all study area intersections. Synchro files will be obtained from DDOT for use in the vehicular capacity analysis. Signal timings for the study area intersections will be obtained from DDOT. Field visits will be performed to update existing geometric information into the Synchro models, and update Synchro files with current traffic signal timing plans. We will apply this methodology to the following analysis scenarios: Existing Conditions (2021 Existing Conditions) 2026 Future Conditions <u>without</u> the project (2026 Background Conditions) 2026 Future Conditions <u>with</u> the project (2026 Total Future Conditions) 0 2026 Mitigated Future Conditions <u>with</u> the project (2026 Mitigated Total Future Conditions), as necessary	DDOT 9.24.21: DDOT concurs. GS response: Noted.
Appendix H. Merge/weave/diverge analysis is required if any of the study intersections include a highway, freeway, or Interstate ramp (DEM 38.3.5.3). HCS software should be used for this analysis.	<ul> <li>Adjustments to the Synchro network and signal timings may be made at locations where background conditions include roadway improvements that would necessitate such changes.</li> <li>The capacity analysis results will show the average delay, v/c, and the resulting LOS for each approach and for the overall intersection (where available), as well as the queuing results obtained from Synchro 10 for the average and 95<sup>th</sup> percentile queue for each lane group.</li> <li>We will highlight all LOS E or LOS F conditions per intersection and approach.</li> <li>We will propose mitigation measures at intersections or approaches that degrade to an LOS E or F as a result of the development, or intersections or approaches operating under LOS E or F under background scenario.</li> <li>We will highlight all locations where the 95th percentile queue length exceeds the length of storage. We will not where the proposed project causes the 95th percentile queue length to exceed the available capacity of a lane group when it does not in the background scenario.</li> <li>We will propose mitigation measures at intersections where the proposed project causes any 95th percentile queue lengths that exceed the available capacity to experience an increase in length of greater than 150 feet along any lane group.</li> </ul>	
	measure.           Will provide copies of Synchro, SimTraffic, and other analysis software printouts in study appendix and electronic copies of analysis files at time of CTR submission.

# **Regional Traffic Growth**

Propose a methodology to account for growth in regional travel demand passing through the study area. An appropriate methodology could include reviewing historic AADT traffic counts, MWCOG model growth rates, data from other planning studies, or recently conducted nearby CTRs. These sources should only be used as a guide.

Generally, maximum annually compounding growth rates of 0.5% in peak direction and 2.0% in non-peak direction are acceptable. Growth rates based should be based on DDOT historical data from 10+ years, if available. Adjustments to the rates may be necessary depending on the amount of traffic assumed from local background developments or if there were recent changes to the transportation network. We propose to examine volumes contained in the MWCOG regional model, as well as historical DDOT AADTs (where available), to develop an average annual growth rate for study area roadways following section 4.6.2 of DDOT's CTR guidelines. A summary of COG model volumes and trends for the study area are attached to this scoping form. This methodology accounts for all future projects and developments in the COG model and allows for district growth rates by direction and time of day.

We based growth rates between 2015/2018 (data collection) and 2021 (existing conditions) on historical AADT growth between 2015/2018 and 2021. We based growth rates between 2021 (existing conditions) and 2026 (project completion) on the differences between the year 2021 and 2026 COG model scenarios. Where the COG model showed negative or minimal growth, we assumed a conservative 0.1% per year minimum growth. Maximum growth rates of 0.5% in the peak direction and 2.0% in the non-peak direction were used.

Proposed growth rates for each roadway for the 2015/2018-2021 period and the 2021-2026 period are shown below.

Roadway Dir.		Proposed Annual Growth Rate Between 2015/2018 & 2021 <sup>1</sup>		Proposed Annual Growth Rate Between 2021 and 2026 <sup>2</sup>		Proposed Total Growth Between 2021 and 2026	
		AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
Evo St SW/SE	EB	0.10%	0.10%	1.00%	0.10%	5.10%	0.50%
Eye St SW/SE	WB	0.10%	0.10%	0.30%	2.00%	1.51%	10.41%

future vehicles based on any changes to the transportation network.	$\boxtimes$ Scoping Graphic(s): Percentage Distribution by Land Use, Direction, Time of Day	left on S. Cap? Or is it because S. Cap & I is already congested?
Percentage distributions must be shown turning at intersections throughout the transportation network and at site driveways and garage entrances to ensure appropriate routing assumptions.		GS response: Westbound left turns from Eye Street to South Capitol Street will be prohibited with the reconfiguration of the intersection, according to plans and Synchro file
The agreed upon trip distribution methodology may not be revised between scoping and CTR		provided by DDOT for the new Sout Capitol Street design.
submission without concurrence by DDOT Case Manager.		DDOT 9.30.21: Our understanding is that the intersection redesign project
Given the District's urban context and grid network, a small portion of trips (up to 5% of trips through an intersection) may be re-routed from their original routes to an alternate route due to traffic congestion.		is intended to restore all movement to the intersection. Please include the WB left-turns, which can occur toda and should in the future. Update the distribution accordingly.
		DDOT 9.24.21: In the inbound percentage graphic, how do you plat to get 45% of the cars into the site from the northwest given the prohibition on U turns and left-turn at I Street? In reality, cars make righ onto K SW to Half SW to I SW and le to S. Cap. Or they continue south on Cap, get off at M SE and left onto H SE up to I and S. Cap.
		GS response: This updated scoping form routes these vehicles to the south to K Street – west to Half Stre – north to Eye Street to proceed to turn left onto northbound South Capitol Street. Based on the trip generation and distributions, approximately 4 AM and 12 PM vehicles would be required to take route. U-turns were assumed to be prohibited from southbound South Capitol Street at Eye Street.
		DDOT 9.30.21: DDOT concurs.

# CSX West Parcel (Square 695) - 8/25/2021, DDOT 9.24.21, GS Responses 9.28.2021, FINAL 9.30.21

The completed CTR must detail all proposed mitigations. The purpose of discussing mitigation at the scoping stage is to highlight DDOT's Significant Impact Policy, DDOT's approach to mitigation, and to give the Applicant an opportunity to gain initial feedback on potential mitigations that may ultimately be proposed. Any mitigation strategies discussed and included in the *Scoping Form* are considered non-binding until formally evaluated in the study and committed to as part of a related action.

CATEGORY & GUIDELINES	CONSULTANT PROPOSAL	DDOT COMMENTS
DDOT Significant Impact Policy	Inte Applicant acknowledges DDOT's Significant Impact Policy.	DDOT 9.24.21: DDOT concurs.
<u>Vehicle Parking Supply</u> DDOT considers a high parking provision as an 'impact' that needs to be mitigated since it is a permanent site feature that encourages additional driving and yield vehicle trips in the future that were not contemplated in the study. Appropriate mitigations include reducing vehicle parking, implementing substantive TDM	The study will comply with all other policies in the Guidance for Comprehensive Transportation Review and the Category & Guidelines column of this Scoping Form not explicitly documented in the Consultant Proposal or DDOT Comments columns.	GS response: Noted.
strategies, off-site non-automotive network upgrades, and making monetary contributions to DDOT for non-auto improvements. See Table 2 to determine if a site is over-parked based on land use and distance to transit.	Include all of the required graphics, tables, and deliverables for the relevant sections determined during scoping, as shown in Table 1 of Guidance for Comprehensive Transportation Review.	
Capacity Impacts at Intersections All site-generated vehicular impacts to the transportation network during study peak hours must be mitigated, per DEM 38.3.5, if any of the following occur:		
<ul> <li>Degradation of an approach or intersection to LOS E or F or intersection v/c ratio increases to 1.0 or greater from Background to Total Future Conditions.</li> </ul>		
<ul> <li>If an approach or intersection exceeds LOS E or F or movement/lane group exceeds 1.0 v/c ratio under Background Conditions then an increase in delay or v/c ratio by 5% or more under Total Future Conditions.</li> </ul>		
<ul> <li>If 95<sup>th</sup> percentile vehicle queuing length exceeds available capacity of approach or turn lane under Total Future Conditions.</li> </ul>		
<ul> <li>If 95<sup>th</sup> percentile queue length of an approach or turn lane increases by 150 feet or more from Background to Total Future Conditions.</li> </ul>		
DDOT Approach to Mitigation	In the Applicant acknowledges DDOT's approach to mitigation that prioritizes (in order of DDOT preference)	DDOT 9.24.21: DDOT concurs.
DDOT's approach to mitigation is to first establish optimal site design and operations to support efficient site circulation. When these efforts alone cannot properly mitigate an action's impact, reducing on-site vehicle parking, implementing TDM measures, making upgrades to the pedestrian, bicycle, and transit	optimal site design, reducing vehicle parking, implementing more TDM strategies, making non-automotive network improvements, and making a monetary contribution to DDOT for non-auto improvements before considering options that increase roadway capacity or alter roadway operations.	GS response: Noted.
networks to encourage use of non-automotive modes, or monetary contribution to DDOT for		

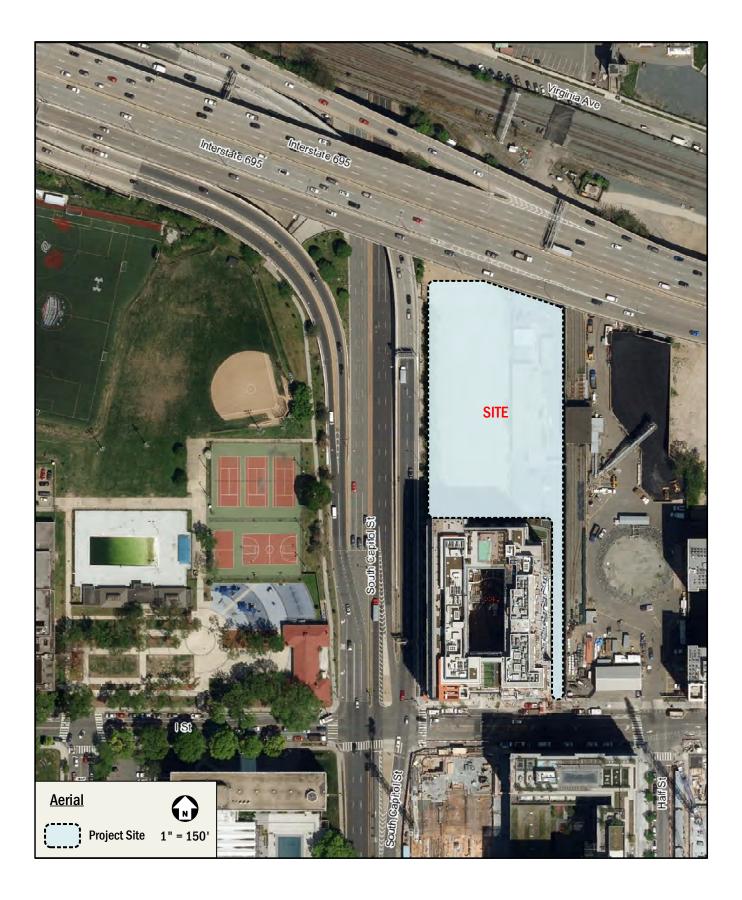

non-auto improvements must be proposed. Only when these options are exhausted will DDOT consider capacity-increasing changes to the roadway network because such changes often have detrimental impacts on non- automotive travel and are often contrary to the District's multi-modal transportation goals.		
Transportation Demand	🖾 The Applicant will include at least a Baseline TDM Plan. The TDM plan will increase to Enhanced Plan or	DDOT 9.24.21: Based on the high parking supply, start with an Enhanced
Management (TDM) A TDM Plan is typically required to offset site- generated impacts to the transportation network or in situations where a site provides more parking than DDOT determines is practical for the use and surrounding context. TDM strategies are also an integral part of the	beyond depending on the parking ratio and other impacts identified in the study.	TDM plan and we will work with the Applicant to include additional items as needed based on the results of the CTR. GS response: The Applicant is proposing a robust TDM plan in the
District's transportation options. As such, a Baseline TDM plan is required in all CTRs regardless of impacts to the network. An Enhanced Plan or greater is required if the site is over-parked per Table 2 or there are roadway impact identified. Sample TDM plans by land use and tier can be found in Appendix C.		CTR to include Baseline + Enhanced + Additional Measures. Further, the Applicant has reduced the parking from 296 to 272 spaces. DDOT 9.30.21: DDOT concurs and supports the reduction in parking.
Document all existing TDM strategies being implemented on-site (even outside of a formal TDM Plan) and those being proposed and committed to by the Applicant. Elements of the TDM Plan included in CTR must be broken down by land use and user (i.e., employee, faculty, resident, visitor, etc.).		
Performance Monitoring Plan	Noted.	DDOT 9.24.21: DDOT concurs.
(PMP) DDOT may require a PMP in situations where anticipated vehicle trips are large in magnitude, unpredictable, or necessitate a vehicle trip cap. Typically, this is required for schools expected to have a significant amount of single occupancy vehicle trips or very large developments.		GS response: Noted.
The monitoring plan will establish thresholds for new trips a project can generate, define post- completion evaluation criteria and methodology, determine the frequency of reporting, and establish potential remediating measures (e.g., adjust trip caps or implement additional TDM strategies).		
Document any existing performance monitoring Plans in effect and any proposed changes.		

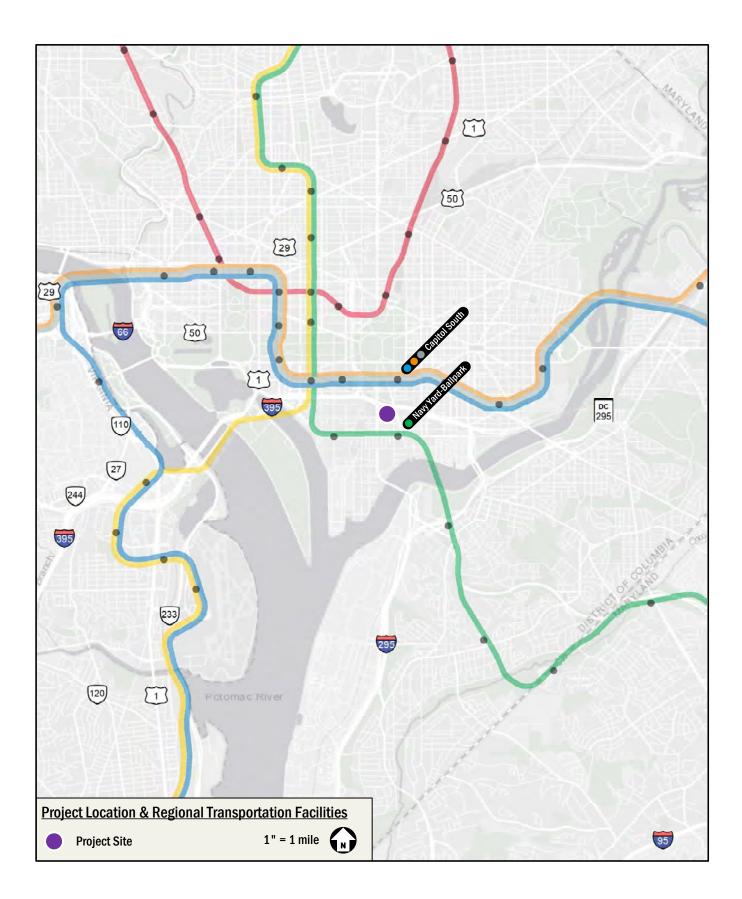

# CSX West Parcel (Square 695) - 8/25/2021, DDOT 9.24.21, GS Responses 9.28.2021, FINAL 9.30.21

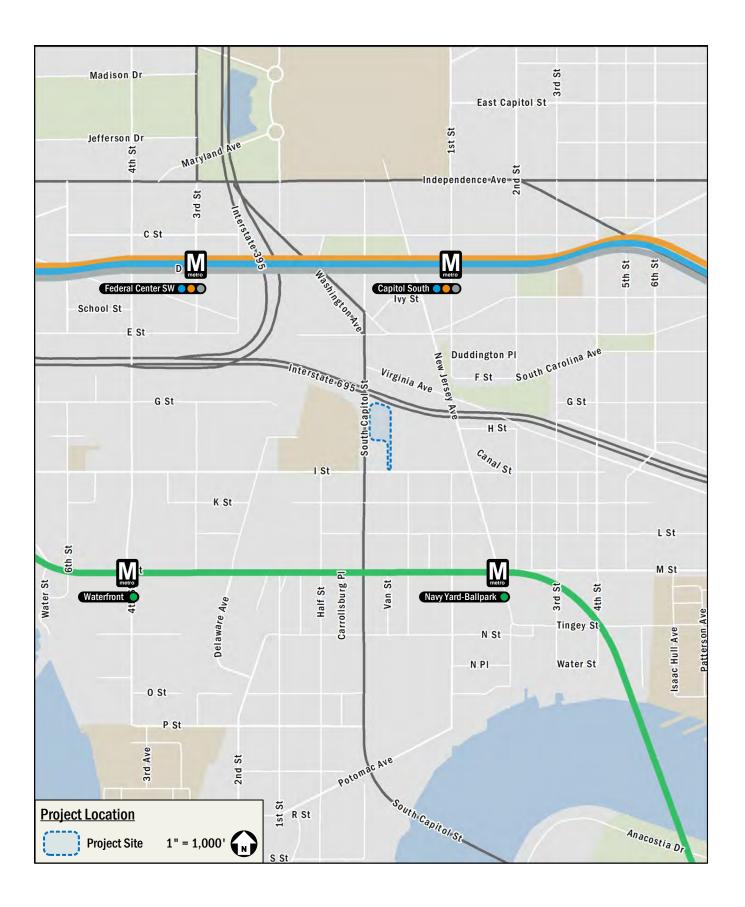

Roadway Operational and Geometric Changes Describe all proposed roadway operational and geometric changes in CTR with supporting analysis and warrants in the study appendix. Detail must be provided on any ROW implications of proposed mitigations. All proposed changes in traffic control must be conducted following the procedures outlined in the Manual of Uniform Traffic Control Devices (MUTCD).	<ul> <li>As noted in the Site Access section of this form, primary vehicular access to the site will be provided from a curb cut located along South Capitol Street, and a additional egress only driveway would be provided via the existing driveway/curb cut connecting Lot 31 to Eye Street SE.</li> <li>The South Capitol Street access is proposed to be right-in/right-out and will serve the project's loading facilities, parking garage, and a dedicated pick-up/drop-off area for ride-hailing and deliveries. The proposed South Capitol Street access previously received concept approval from DDOT PSC.</li> <li>The Eye Street SE access is proposed to be one-way southbound, serving only resident egress from the parking garage. This drive aisle is approximately 20-feet wide and would be reconfigured to provide a pedestrian pathway, a bicycle lane and a southbound (egress only) vehicular travel lane.</li> <li>Additional details and justification for the proposed access scheme will be provided in the CTR.</li> </ul>	DDOT 9.24.21: Acknowledged. GS response: Noted.
Note any preliminary ideas being considered.		

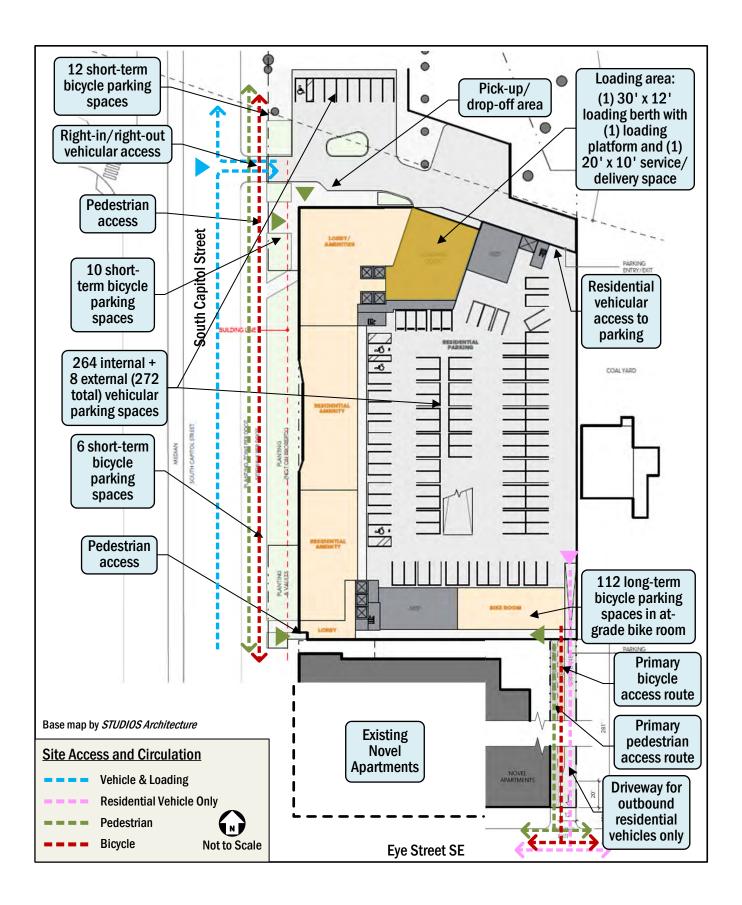

# Section 6: ADDITIONAL TOPICS FOR DISCUSSION DURING SCOPING

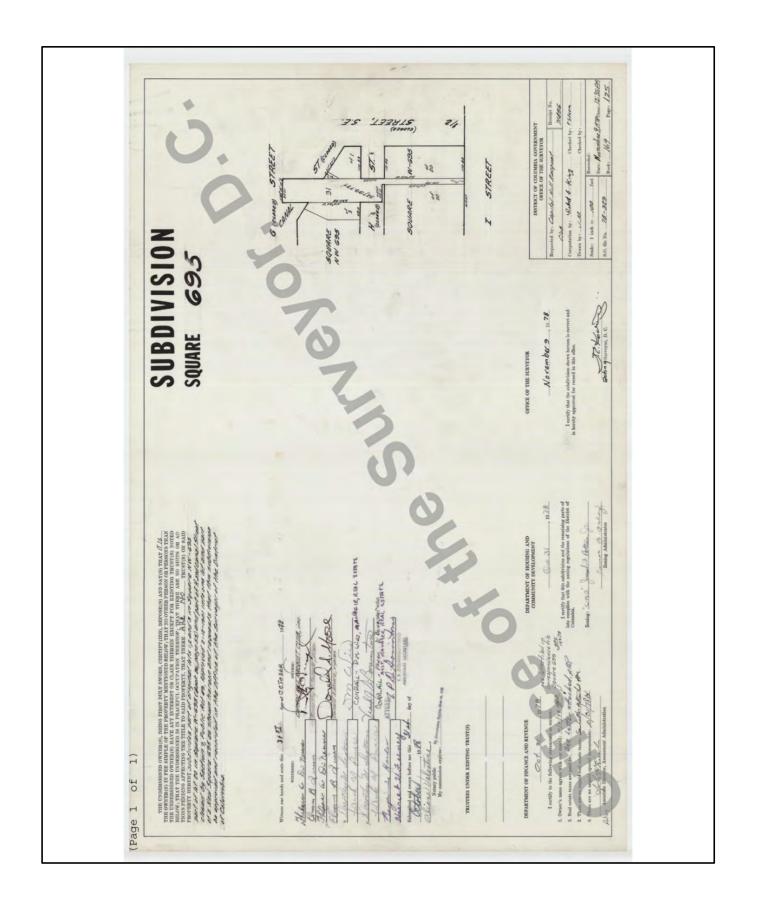

<b>CATEGORY &amp; GUIDELINES</b>	CONSULTANT PROPOSAL	DDOT COMMENTS
ANC Discussions and Feedback	Discussions with ANC 6D have begun and are ongoing.	DDOT 9.24.21: DDOT concurs.
Provide an update on the status of Community Benefits Agreement, any ANC concerns, or other concerns expressed by the community.		GS response: Noted.
Miscellaneous Items for	N/A	DDOT 9.24.21: DDOT concurs.
Discussion		GS response: Noted.
These items could include relevant on-going discussions with other agencies and stakeholders or seeking direction other types of analyses to be included (i.e., traffic calming proposal, TOPP, TMP).

<sup>1</sup> These rates were applied to volumes recorded in 2015 and 2018 that were used to establish 2021 existing conditions. Rates are based on historical AADT data.

<sup>2</sup> These rates were applied to volumes grown from 2021 existing conditions. Rates are based on MWCOG's currently adopted regional transportation model.

<sup>3</sup> Neither AADT nor MWCOG data is available for these streets; therefore a conservative 0.1% growth rate per year was used.

E. Trip Generation for Background Developments

## Mode Split Assumptions - Monument Valley

## **Residential Component**

## Description of residential component of project:

The development will contain approximately 445 residential dwelling units, 60,000 S.F. of retail

## Pertinent Mode Split data from other sources:

				Mode

## Mode Split assumed in TIS:

	Mode							
Use	Drive	Pass-by	Transit	Bike	Walk	Telecommute/Other		
Retail Mode Split	4.	45%		10%	35%			

Notes: -Two WMATA survey sites listed are more applicable to the ground-floor neighborhood retail

# **Trip Generation - Monument Valley** Residential ( 800 du), Retail (44,000 S.F.)

## Step 1: Base trip generation using ITEs' Trip Generation

Land Lise	Land Use Land Use Code Quantity			AM Peak	Hour		PM Peak Hour Daily			у	
Land Ose		(x)	In	Out	Total	In	Out	Total	In	Out	Total
Apartments	221	445 du	42 veh/hr	118 veh/hr	160 veh/hr	120 veh/hr	76 veh/hr	196 veh/hr	1211 veh	1210 veh	2421 veh
		Calculation Details:	26%	74%	=0.36X	61%	39%	=0.44X	50%	50%	=5.44X
Retail	820	60,000 sf	35 veh/hr	21 veh/hr	56 veh/hr	110 veh/hr	119 veh/hr	229 veh/hr	1133 veh	1132 veh	2265 veh
		Calculation Details:	62%	38%	=0.94(X/1000)	48%	52%	=3.81(X/1000)	50%	50%	=37.75(X/1000)

## Step 2: Convert to people per hour, before applying mode splits

Land Use	Se People/Car AM Peak Hour				PM Pea	ak Hour	Daily           In         Out         Total           1429 ppl         1428 ppl         2857 ppl		У	
Lanu Use	(from 2017 NHTS, Table 16)	In	Out	Total	In	Out	Total	In	Out	Total
Apartments	1.18 ppl/veh	50 ppl/hr	139 ppl/hr	189 ppl/hr	142 ppl/hr	90 ppl/hr	231 ppl/hr	1429 ppl	1428 ppl	2857 ppl
Retail	1.82 ppl/veh	64 ppl/hr	38 ppl/hr	102 ppl/hr	200 ppl/hr	217 ppl/hr	417 ppl/hr	2062 ppl	2060 ppl	4122 ppl

## Step 3: Split between modes, per assumed Mode Splits

Land Use	Mode	Split		AM Peak	Hour		PM Peak Hour			Daily		
Lanu Ose	Mode	Split	In	Out	Total	In	Out	Total	In	Out	Total	
Apartments	Auto	40%	20 ppl/hr	56 ppl/hr	76 ppl/hr	57 ppl/hr	35 ppl/hr	92 ppl/hr	572 ppl	571 ppl	1143 ppl	
Apartments	Transit	40%	20 ppl/hr	56 ppl/hr	76 ppl/hr	57 ppl/hr	35 ppl/hr	92 ppl/hr	572 ppl	571 ppl	1143 ppl	
Apartments	Bike	5%	3 ppl/hr	6 ppl/hr	9 ppl/hr	7 ppl/hr	5 ppl/hr	12 ppl/hr	71 ppl	72 ppl	143 ppl	
Apartments	Walk	15%	8 ppl/hr	20 ppl/hr	28 ppl/hr	21 ppl/hr	14 ppl/hr	35 ppl/hr	214 ppl	215 ppl	429 ppl	
Retail	Auto	45%	29 ppl/hr	17 ppl/hr	46 ppl/hr	90 ppl/hr	98 ppl/hr	188 ppl/hr	928 ppl	927 ppl	1855 ppl	
Retail	Transit	10%	6 ppl/hr	4 ppl/hr	10 ppl/hr	20 ppl/hr	22 ppl/hr	42 ppl/hr	206 ppl	206 ppl	412 ppl	
Retail	Bike	10%	6 ppl/hr	4 ppl/hr	10 ppl/hr	20 ppl/hr	22 ppl/hr	42 ppl/hr	206 ppl	206 ppl	412 ppl	
Retail	Walk	35%	22 ppl/hr	14 ppl/hr	36 ppl/hr	70 ppl/hr	76 ppl/hr	146 ppl/hr	722 ppl	721 ppl	1443 ppl	

## Step 4: Convert auto trips back to vehicles/hour

Land Use People/Car			AM Peak	Hour	PM Peak Hour				Daily		
Lanu Use	(from 2017 NHTS, Table 16)	In	Out	Total	In	Out	Total	In	Out	Total	
Apartments	1.18 ppl/veh	17 veh/hr	47 veh/hr	64 veh/hr	48 veh/hr	30 veh/hr	78 veh/hr	485 veh	484 veh	969 veh	
Retail	1.82 ppl/veh	16 veh/hr	9 veh/hr	25 veh/hr	49 veh/hr	54 veh/hr	103 veh/hr	510 veh	509 veh	1019 veh	

## Trip Gen Summary for Monument Valley

Mode		AM Peak	Hour		PM Pea	ak Hour	Daily		
Mode	In	Out	Total	In	Out	Total	In	Out	Total
Auto	33 veh/hr	56 veh/hr	89 veh/hr	97 veh/hr	84 veh/hr	181 veh/hr	995 veh	993 veh	1988 veh
Transit	26 ppl/hr	60 ppl/hr	86 ppl/hr	77 ppl/hr	57 ppl/hr	134 ppl/hr	778 ppl/hr	777 ppl/hr	1555 ppl/hr
Bike	9 ppl/hr	10 ppl/hr	19 ppl/hr	27 ppl/hr	27 ppl/hr	54 ppl/hr	277 ppl/hr	278 ppl/hr	555 ppl/hr
Walk	30 ppl/hr	34 ppl/hr	64 ppl/hr	91 ppl/hr	90 ppl/hr	181 ppl/hr	936 ppl/hr	936 ppl/hr	1872 ppl/hr

This section outlines the transportation demand of the proposed West Half Street project. It summarizes the projected trip generation of the site by land use (residential and retail) and by mode, which forms the basis for the chapters that follow.

Traditionally, weekday peak hour trip generation is calculated based on the methodology outlined in the Institute of Transportation Engineers' (ITE) *Trip Generation*, 9<sup>th</sup> Edition. This methodology was supplemented to account for the urban nature of the site (*Trip Generation* provides data for non-urban, low transit use sites) and to generate trips for multiple modes including vehicle, transit, biking, and walking.

Residential trip generation was calculated based on ITE land use 220, Apartment, splitting trips into different modes using assumptions derived from census data for the residents that currently live near the site and mode splits used for residential developments that have recently been studied. Mode splits were adjusted based on the anticipated parking supply.

Retail trip generation was calculated based on ITE land use 820, Shopping Center. Rates based on average vehicle trip ends per 1,000 square feet of gross leasable area were used. Mode splits for the retail portion of the site were based on information contained in WMATA's 2005 *Development-Related Ridership Survey* and mode splits used for retail uses of nearby developments that have recently been studied. A summary of mode splits for all land uses within the development is shown on Table 5.

#### Table 5: Mode Split Summary

Land Use —	Mode Split								
	Auto	Transit	Bike	Walk					
Residential	45%	43%	4%	8%					
Retail	40%	40%	5%	15%					

It should be noted that due to the changes to the development program from the approved development to the proposed development, particularly the transition from office space to residential space, the overall trip generation for the development has decreased for both vehicular and non-auto modes. A summary of the multimodal trip generation for the proposed development, the approved development, and the difference between the two is provided in Table 4, Table 7, and Table 6, respectively, for the morning and afternoon peak hours. As shown, the vehicular trip generation decreases by 70 trips in the morning peak hour and 43 trips in the afternoon peak hour due to the updated development program. The nonauto trip generation decreases by 55 trips in the morning peak hour and 42 trips in the afternoon peak hour due to the updated development program. Detailed calculations are included in the Technical Appendix.

Mode	Land Use		AM Peak Hour			PM Peak Hour	
Widde	Land Ose	In	Out	Total	In	Out	Total
	Apartments	19 veh/hr	76 veh/hr	95 veh/hr	73 veh/hr	40 veh/hr	113 veh/hr
Auto	Retail	16 veh/hr	9 veh/hr	25 veh/hr	46 veh/hr	51 veh/hr	97 veh/hr
	Total	35 veh/hr	85 veh/hr	120 veh/hr	119 veh/hr	91 veh/hr	210 veh/hr
	Apartments	20 ppl/hr	82 ppl/hr	102 ppl/hr	79 ppl/hr	43 ppl/hr	122 ppl/hr
Transit	Retail	28 ppl/hr	17 ppl/hr	45 ppl/hr	82 ppl/hr	90 ppl/hr	172 ppl/hr
	Total	48 ppl/hr	99 ppl/hr	147 ppl/hr	161 ppl/hr	133 ppl/hr	294 ppl/hr
	Apartments	2 ppl/hr	8 ppl/hr	10 ppl/hr	7 ppl/hr	4 ppl/hr	11 ppl/hr

# **TRIP GENERATION**

This section outlines the transportation demand of the proposed Yards Parcel L1 project. It summarizes the projected trip generation of the site by mode, which forms the basis for the chapters that follow. Traditionally, weekday peak hour trip generation is calculated based on the methodology outlined in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 9<sup>th</sup> Edition. This methodology was supplemented to account for the urban nature of the site (the *Trip Generation Manual* provides data for non-urban, low transit use sites) and to generate trips for multiple modes.

Hotel trip generation was calculated based on ITE land use 310, Hotel. Mode splits for the retail portion of the site were based on information contained in WMATA's 2005 *Development-Related Ridership Survey* and mode splits used for hotel uses of nearby developments that have recently been studied. Retail trip generation was calculated based on ITE land use 820, Shopping Center. Mode splits for the retail portion of the site were based on information contained in WMATA's 2005 *Development-Related Ridership Survey* and mode splits used for retail uses of nearby developments that have recently been studied.

The below-grade parking garage will contain 85 parking spaces that will be shared by the retail components of Parcel L1 and L2, as well as open to the public for general shared use parking or hotel guests if demand dictates. In order to account for the public parking portion of the development, the analysis will include the trips generated by the site's existing use (a surface parking lot with 202 public parking spaces).

For purposes of determining the impact of the overall site, trips generated by the residential and retail components of Parcel L2 were included at the request of DDOT. Residential trip generation was calculated based on ITE land use 220, Apartment, splitting trips into different modes using assumptions derived from census data for the residents that currently live near the site. The vehicular mode split was then

Mada			AM Peak Hou	r		PM Peak Hour	•

## **3.1 SITE TRANSPORTATION DEMAND**

#### 3.1.1 Base Trip Generation

Traditionally, trip generation for a proposed development is calculated based on the methodology outlined in the Institute of Transportation Engineers' (ITE) *Trip Generation*, 9<sup>th</sup> Edition. For this report, the methodology was supplemented to account for the urban nature of the site (*Trip Generation* provides data for non-urban, low transit use sites) and to generate trips for multiple modes. The following summarizes the methodology that was used in this study, which was approved by DDOT per the Scoping Form contained in the Technical Attachments.

First, ITE *Trip Generation* was used to develop base vehicular-trip rates, not accounting for reductions due to mode split. The *Trip Generation Handbook*, 2<sup>nd</sup> Edition was also consulted for guidelines for estimating trip generation. The following summarizes the trip generation projections:

The office trips were projected based on Land Use (LU) 715 for Single Tenant Office Building. The total weekday trips, as well as the morning and afternoon weekday peak hour trips, were generated using the regression equations provided based on average vehicle trip ends per square foot of office space. The regression equations were chosen for the Office projections, due to the high (over 0.75) coefficient of determinations (R<sup>2</sup>) for each time period. The weekday morning and afternoon peak hours generally correspond to the peak hours of the adjacent roadway network – one hour between 7:00 and 9:00 AM and between 4:00 and 6:00 PM, respectively. Based on this, the peak hour of the adjacent roadway network was used for the trip generation projection instead of the peak hours of the Generator.

Following the base vehicular- trip rate calculations, the vehicle-trips were converted to person-trips based on the estimated average vehicle occupancy (AVO). AVO rates were obtained from the *Summary of Travel Trends – 2009 National Household Travel Survey* performed by the U.S. Department of Transportation Federal Highway Administration<sup>4</sup>.

#### 3.1.2 Mode Split

Following the base trip generation discussed in Section 3.1.1, the trips were split into each mode: transit (consisting of both Metrorail and Metrobus), walking, biking, and vehicle. The mode split estimates for the DC Water PUD were developed using survey information contained in several sources: WMATA's 2005 Development-Related Ridership Survey, U.S. Department of Transportation's 2009 National Household Travel Survey (NHTS) Summary of Travel Trends, Commuter Connections' 2010 State of the Commute Survey Report, estimates from studies for nearby approved developments, and files from Gorove/Slade's library. These assumptions were approved by DDOT per the Scoping Form contained in the Technical Attachments.

Several sources provide mode split information that can be used to develop estimates for future residents of the DC Water Site PUD, including results from the 2007-2011 American Community Survey, WMATA's *Ridership Survey* of office sites within the District, and studies for other nearby developments, as shown below on Table 5. WMATA Ridership Survey data for Office sites within the CBD noted office auto modal splits of 21 percent while studies for other nearby developments noted auto modal splits of 40 to 50 percent (with higher auto modal splits for developments further from Metro, such as the Riverfront on the Anacostia development). The modal splits assumed for the DC Water PUD office space is noted on

<sup>&</sup>lt;sup>4</sup> AVO rates obtained from "Table 16: Average Vehicle Occupancy for Selected Trip Purpose 1977, 1983, 1990, and 1995 NPTS, and 2001 and 2009 NHTS (Person Miles per Vehicle Mile" for 2009 data. AVO for Retail uses based on "Shopping" Trip Purpose. AVO for Office and Residential uses based on "To or From Work" Trip Purpose.

Table 5 below is noted to be similar to that assumed for other nearby developments. Therefore, the office mode splits assumed for the DC Water Site will provide a conservative analysis.

## Table 5: Modal Split Assumptions

## **3: IMPACTS REVIEW**

This section of the report focuses on the influence and impact site generated traffic will have on the local transportation network, with the following purpose:

- To provide information to the District Department of Transportation (DDOT) and other agencies on how the development of the site will influence the local transportation network. This report accomplishes this by identifying the potential trips generated by the site on all major modes of travel and where these trips are expected to travel to and from.
- To determine if development of the site will lead to adverse impacts on the local transportation network. This
  report accomplishes this by projecting future conditions with and without development of the site and performing
  analysis of intersection delays. These delays are compared to the acceptable levels of delay set by DDOT standards
  to determine if the project will negatively impact the study area. The report describes what improvements to the
  transportation network are needed to mitigate adverse impacts.

## 3.1 Site Transportation Demand

#### 3.1.1 Base Trip Generation

Traditionally, trip generation for a proposed development is calculated based on the methodology outlined in the Institute of Transportation Engineers' (ITE) *Trip Generation*, 8<sup>th</sup> Edition. For this report, the methodology was supplemented to account for the urban nature of the site (*Trip Generation* provides data for non-urban, low transit use sites) and to generate trips for multiple modes. The following summarizes the methodology that was used in this study.

First, ITE *Trip Generation* was used to develop base vehicular-trip rates, not accounting for reductions due to mode split. The Shopping Center trip rate was applied in lieu of individual trip rates, such as bank, pharmacy, and supermarket, for the retail uses because applying individual rates would not account for interaction between the retail uses (shoppers visiting more than one store). The Shopping Center trip rate accounts for these uses and interactions.

Second, the vehicle-trips were converted to person-trips by assuming an average vehicle occupancy of 1.1 persons per vehicle, based on the Census Data Transportation Planning Package (CTPP) 2000. Table 6 and Table 7 show the base number of trips generated by the proposed development for Phase 1 and for Phases 2-4, respectively.

					Trip	Generatio	n for Phas	e1	
Land Use	Size*	Size*		AM Peak Hour			M Peak Ho	ur	Weekday Total
		-	In	In Out	Total	In	Out	Total	weekday tota
Vehicle Trips

#### Table 7: Base Vehicle- and Person-Trip Generation (Phases 2, 3, and 4)

## 3.1.2 Mode Split

Following the base trip generation shown in Section 3.1.1, the trips were split into each mode: transit (consisting of both Metrorail and Metrobus/DC Circulator), walking, biking, and vehicle. Each land use was analyzed by mode separately in order to account for varying mode splits. The mode split estimates for the RiverFront PUD were developed using survey information contained in several sources, WMATA's 2005 Development-Related Ridership Survey, WMATA's Station Site and Access Planning Manual, Commuter Connections' 2010 State of the Commute Survey Report, results from the 2000 U.S. Census, and files from Gorove/Slade's library. The following describes in detail how the mode split assumptions were assembled based on information from these sources.

#### Retail Uses

The main source of mode split information for retail sites is WMATA's *Ridership Survey*. Contained within the report are summaries of mode splits for five retail sites within the Metropolitan area, and one within the District. The one site within the District was the U Street area, which of all of the sites surveyed is the closest in characteristics to the RiverFront, as it is a 'main street' retail area with ground floor retail mixed in with other land uses. Table 8 summarizes the mode split information for the U Street site, and all of the retail sites surveyed.

#### Table 8: WMATA Ridership Survey Mode Split for Retail Sites

Retail Location	Mode							
	Metrorail	Metrobus & Other Transit	Auto	Walk & Other				
Central Business District	44%	13%	19%	25%				
All sites surveyed	29%	8%	36%	27%				

Although the U Street site is closest in characteristics to the RiverFront PUD, in order to maintain a conservative assumption, this report uses the mode splits for the all retail sites surveyed as a basis for assumptions. This report uses the following mode split assumptions for retail:

- Vehicle: 35%
- Transit: 40%
- Walk: 20%
- Bike: 5%

## Office Uses

WMATA's 2005 Development-Relates Ridership Survey has generally been used as the standard source for developing mode split estimates. Information provided within the report shows that office sites in the central business district and all office sites surveyed had the following mode splits, shown in Table 9.

#### Table 9: WMATA Ridership Survey Mode Split for Office Sites

Office Location	Mode							
	Metrorail	Metrobus & Other Transit	Auto	Walk & Other				
Central Business District	63%	12%	21%	5%				
All sites surveyed	25%	9%	62%	6%				

The central business district mode split is an average of several sites surveyed. Applying it to the RiverFront PUD may not be appropriate because the sites surveyed do not have similar characteristics, such as the amount of parking per square foot of space, walking distance to Metrorail and employee benefits for non-auto commuters. Notably, the walking distance from RiverFront to the Navy Yard station is longer than all of the central business district sites surveyed. *The Ridership Survey* includes an analysis that concludes that the percentage ridership via Metrorail decreases 0.96% for every 100 feet the site is located from a Metrorail station. Applying this to RiverFront, using a starting assumption of 63% and an average walking distance of 2200 feet, the expected Metrorail mode split for RiverFront would be 42%.

Using data from other office sites surveyed in WMATA's report would also not be appropriate, because they also differ greatly. Each site has significantly more parking spaces per square foot of office space. Even more notable is that the *Ridership Survey* notes that 72% of the office commuters that responded to the survey were offered subsidized or free parking by their employers. The Transportation Demand Management (TDM) plan for the RiverFront PUD contains measures that will ensure that the parking garage will be priced at market rate for the majority of users, including office workers.

Information contained within the 2010 State of the Commute report shows why only offering market rate pricing will have a large influence on the office mode split. Table 10 shows the mode split difference between all commuters surveyed in the State of the Commute surveys split between whether the commuter was offered free parking.

#### Transportation Impact Study – RiverFront on the Anacostia PUD

Table 10: Mode Split Difference Based on Free Parking	Entire DC Area)
---	-----------------

Parking Benefit			Mode		
	Drive Alone	Carpool	Bus	Train	Walk/Bike
Free Parking	82%	6%	3%	5%	4%
No Free Parking	42%	10%	11%	32%	6%

The State of the Commute report also contains responses of mode splits for all commuters employed in the District, as follows:

- Drive alone: 42%
- Carpool: 11%
- Bus: 10%
- Metrorail: 31%
- Commuter Rail: 2%
- Bike: 1%
- Walk: 3%

Because these surveys are from sites averaged across the entire District, and not just sites from the CBD like the WMATA *Ridership Survey*, this study uses these mode splits as a starting point for building assumptions for the RiverFront.

The following steps were taken to assemble the mode split estimates, starting with the *State of Commute's* average for all office sites within the District. The amount of transit use was assumed to be 40%, because it is expected that the RiverFront PUD will have similar transit use to both all employment sites in the District (43%) and of all sites surveyed that charge for parking (42%) per the *State of the Commute* survey. The amount of cycling was set to 3%, to reflect the site's location near the Anacostia Riverfront Trail and the amount of residents located within a 10-15 minute bicycle ride from the site. Similarly, the walk mode split was increased to reflect the number of existing and future residents living within in walking distance of the site, compared to the District average as a whole.

Thus, the assumptions on office mode split for the RiverFront are as follows:

- Vehicle: 50%
- Transit: 40%
- Walk: 7%
- Bike: 3%

#### **Residential Uses**

Several sources provide mode split information that can be used to develop mode split estimates for future residents of the RiverFront, including results from the 2000 census, WMATA's Ridership Survey of residential sites within the District, and the State of the Commute report that contains the average mode split of commuters who live in the District. The mode splits from these three sources are shown in Table 11.

33

	Mode							
Information Source	Train	Metrobus & Other Transit	Auto	Walk & Other				
2000 Census <sup>1</sup>	20%	25%	33%	22%				
State of the Commute <sup>2</sup>	27%	14%	48%	11%				
WMATA Ridership Survey <sup>3</sup>	50%	6%	18%	26%				

#### Table 11: Mode Split Information for Residential Uses

Of these three sources of information, the one that most closely contains the transportation characteristics of the RiverFront PUD would be the census information from the tracts where it is located. The sites that comprise the Ridership Survey's average mode splits do not compare well based on location and distance from the Metrorail station. The State of the Commute is an average for the entire District, and the difference between its mode splits and the census data make sense, given that the census tracts adjacent to the RiverFront site have high quality bus service.

Thus, this report uses the census information as a starting point for assembling residential mode split assumptions. The following steps were taken to assemble the mode split estimates, using this data as a starting point.

- The amount of transit use was assumed to be 40%, slightly less than the census tracts surrounding it (45%).
- The amount of cycling was set to 5%, to reflect the site's location near the Anacostia Riverfront Trail and the amount of residents located within a 10-15 minute bicycle ride from the site.
- Similarly, the walk mode split was set to 15% to reflect the amount of existing and future resident in walking distance of the site, compared to the District average as a whole. The total amount of bicycling and walking totals 20%, which is close to the 'Walk & Other' percentages observed in the census data.

Thus, the assumptions for residential mode split at the RiverFront are as follows:

- Vehicle: 40%
- Transit: 40%
- Walk: 15%
- Bike: 5%

#### Hotel Uses

The main source of mode split information for hotel sites is WMATA's *Ridership Survey*. Contained within the report are summaries of mode splits for four retail sites within the Metropolitan area. Table 12 summarizes the mode split information of the hotel sites surveyed.

#### Table 12: WMATA Ridership Survey Mode Split for Hotel Sites

Office Location	Mode							
	Metrorail	Metrobus & Other Transit	Auto	Walk & Other				
All sites surveyed	27%	4%	38%	31%				

Weighted average for responses from census tracts 64 and 72

<sup>&</sup>lt;sup>2</sup> Survey respondents that live within the District

<sup>&</sup>lt;sup>3</sup> For 'CBD' locations, which includes all residential sites surveyed within the District

#### Transportation Impact Study – RiverFront on the Anacostia PUD

This report uses the mode splits for the all retail sites surveyed as a basis for assumptions, stating with assuming that transit use of hotel traffic will be 30%, similar to the WMATA survey results.

- Drive: 45%
- Transit: 30%
- Walk: 20%
- Bike: 5%

#### Summary

Table 13 summarizes the mode split assumptions.

#### Table 13: Mode Split Assumptions

		Mode	Split	
Land Use	Vehicle	Transit	Walk	Bike
Retail	35%	40%	20%	5%
Office	50%	40%	7%	3%
Residential	40%	40%	15%	5%
Hotel	45%	30%	20%	5%

## 3.1.3 Multi-Modal Trip Generation

Based on the trip generation calculations outlined in Section 3.1.1 and the mode split assumptions shown in Section 3.1.2 (and summarized in Table 13), Table 14 shows the resulting calculations by mode for Phase 1. Phase 1 of the proposed PUD will generate approximately 69 vehicular trips, 77 transit trips, 30 walking trips, and 10 bicycle trips during the morning peak hour; 95 vehicular trips, 107 transit trips, 42 walking trips, and 14 bicycle trips during the afternoon peak hour; and 1,023 vehicular trips, 1,156 transit trips, 463 walking trips, and 145 bicycle trips during a typical weekday.

Table 15 shows the resulting calculations by mode for Phases 2, 3, and 4. The remaining phases of the proposed PUD will generate approximately 429 vehicular trips, 373 transit trips, 124 walking trips, and 41 bicycle trips during the morning peak hour; 432 vehicular trips, 383 transit trips, 134 walking trips, and 42 bicycle trips during the afternoon peak hour; and 4,161 vehicular trips, 3,652 transit trips, 1,447 walking trips, and 433 bicycle trips during a typical weekday.

#### Table 14: Trip Generation for Proposed Development by Mode (Phase 1 Only)

	Trip Generation by Mode for Phase 1

## Step 2: Convert to people per hour, before applying mode splits

Land Use	People/Car	AM Peak Hour			PM Peak Hour			Daily		
Lanu Ose	(from 2017 NHTS, Table 16)	In	Out	Total	In	Out	Total	In	Out	Total
Apartments	1.18 ppl/veh	35 ppl/hr	101 ppl/hr	137 ppl/hr	103 ppl/hr	65 ppl/hr	168 ppl/hr	1034 ppl	1034 ppl	2067 ppl
Retail	1.82 ppl/veh	11 ppl/hr	5 ppl/hr	16 ppl/hr	31 ppl/hr	33 ppl/hr	64 ppl/hr	319 ppl	317 ppl	635 ppl

## Step 3: Split between modes, per assumed Mode Splits

Land Use	Mode	Split		AM Peak	Hour		PM Pea	ak Hour		Dail	У
Lanu Use	woue	Split	In	Out	Total	In	Out	Total	In	Out	Total
Apartments	Auto	40%	14 ppl/hr	41 ppl/hr	55 ppl/hr	41 ppl/hr	26 ppl/hr	67 ppl/hr	414 ppl	413 ppl	827 ppl
Apartments	Transit	40%	14 ppl/hr	41 ppl/hr	55 ppl/hr	41 ppl/hr	26 ppl/hr	67 ppl/hr	414 ppl	413 ppl	827 ppl
Apartments	Bike	5%	2 ppl/hr	5 ppl/hr	7 ppl/hr	5 ppl/hr	3 ppl/hr	8 ppl/hr	52 ppl	51 ppl	103 ppl
Apartments	Walk	15%	5 ppl/hr	16 ppl/hr	21 ppl/hr	15 ppl/hr	10 ppl/hr	25 ppl/hr	155 ppl	155 ppl	310 ppl
Retail	Auto	45%	5 ppl/hr	2 ppl/hr	7 ppl/hr	14 ppl/hr	15 ppl/hr	29 ppl/hr	144 ppl	142 ppl	286 ppl
Retail	Transit	10%	1 ppl/hr	1 ppl/hr	2 ppl/hr	3 ppl/hr	3 ppl/hr	6 ppl/hr	32 ppl	32 ppl	64 ppl
Retail	Bike	10%	1 ppl/hr	1 ppl/hr	2 ppl/hr	3 ppl/hr	3 ppl/hr	6 ppl/hr	32 ppl	32 ppl	64 ppl
Retail	Walk	35%	4 ppl/hr	2 ppl/hr	6 ppl/hr	11 ppl/hr	11 ppl/hr	22 ppl/hr	112 ppl	110 ppl	222 ppl

## Step 4: Convert auto trips back to vehicles/hour

Land Use	People/Car	AM Peak Hour			PM Peak Hour			Daily		
	(from 2017 NHTS, Table 16)	In	Out	Total	In	Out	Total	In	Out	Total
Apartments	1.18 ppl/veh	12 veh/hr	35 veh/hr	47 veh/hr	35 veh/hr	22 veh/hr	57 veh/hr	351 veh	350 veh	701 veh
Retail	1.82 ppl/veh	3 veh/hr	1 veh/hr	4 veh/hr	8 veh/hr	8 veh/hr	16 veh/hr	79 veh	78 veh	157 veh

## Trip Gen Summary for CSX Parcel East

Mode	AM Peak Hour			PM Peak Hour			Daily		
Mode	In	Out	Total	In	Out	Total	In	Out	Total
Auto	15 veh/hr	36 veh/hr	51 veh/hr	43 veh/hr	30 veh/hr	73 veh/hr	430 veh	428 veh	858 veh
Transit	15 ppl/hr	42 ppl/hr	57 ppl/hr	44 ppl/hr	29 ppl/hr	73 ppl/hr	446 ppl/hr	445 ppl/hr	891 ppl/hr
Bike	3 ppl/hr	6 ppl/hr	9 ppl/hr	8 ppl/hr	6 ppl/hr	14 ppl/hr	84 ppl/hr	83 ppl/hr	167 ppl/hr
Walk	9 ppl/hr	18 ppl/hr	27 ppl/hr	26 ppl/hr	21 ppl/hr	47 ppl/hr	267 ppl/hr	265 ppl/hr	532 ppl/hr
