

I apologize in advance if this is a duplicate comment, I have attempted to submit multiple times and was met with errors, and wanted to make sure the comment was successful. If this one makes it in, please ignore my prior comments as this one supersedes them.

I live one block south of this lot at 1621 T, a large (for DC) condominium building in a cluster of others. I recognize that this is an early stage in a longer process to replace the existing police and fire station structures at 1617 U, but I emphatically support doing so. I support adding housing above the replacement stations and doing so at maximum density, with a goal of increasing the housing stock in the neighborhood, so more people who want to live here can afford to do so. I would love to see a small library or community space be part of the mix, but I want to be sure the height is maximized to allow for something like this without severely cutting into the potential for additional dwelling space - and a map amendment to maximize the buildable height helps to get there. Thanks so much for proactively engaging the community like this.
